01-08 Consultative Session: Navy Federal Wealth Omnichannel Integration and NFIS Growth Roadmap

2026-01-08 19:05:45

A lot of people. There's a lot of people on our end. Mayura, I'm going to imagine you actually have probably met the majority of them. We do have folks from our NFIS side. I see Michael Dale, who leads our NFIS group. I see Patrick Bryan, that is one of the managers on his team. Of course, you're familiar with Molly already, and everybody else.

We can't see everyone. So, Michael, can you help? I know Tyler is on, but I think you've met Tyler already, but I don't know who else is on. We can see Patrick, Molly, and Michael, and now I see Tyler. MSO and UX are represented.

Hi, Michelle. I have seen Michelle and Chris.

Obviously we have an FFT, we have an FIS, we have digital folks, Merlin, myself, Amir.

Justin Zeiden will be here shortly.

Yeah. Perfect.

So I think on our side, too, you have the product management team as well as the member service team that supports all digital investors and then Patrick Bryan's on because he leads all of the investment advisors and that whole program, you know, Michael Daly's the head. So we've got NFIS, so we've got, it seems like the goal, which was the right one, is representation all the way from...

product and ops knowledge. So is Yusra going to come down here? I thought I saw her on the call. She's, is Michael Hay on the call? Michael should be on the call. Michael's on the call. I'm here.

Yeah, I'm here. Yusra's having trouble connecting. She might come to the room. I don't know. I didn't, I kind of told her either connect or go to the room. So she might show up. And then we also.

have compliance on the call as well. Hey Molly, if Yusra IMs you, this conference room is like as if you were going out the front door of the building on the first floor

and then to the right and right. Cause you know, just to help her, she's not familiar with our building yet. So, she'll get there. Yeah. So I think we're, we're in all the good. Well represented. Yeah. Right.

And I don't know if it was said, but Mark Gers is on the call. I'm Patrick Terrell with NFIS as well. And I think Elisa is also on the call to lose our service area. Yep. Perfect. So.

I'm just going to dive in but before we dive in I think there are some new folks on there are a lot of new folks who probably don't know Backbase and maybe Joey I'm going to put you on the spot here but just to give us a quick quick background about who we are you want to take you want to take that.

I think it might be good for some of the NFIS folks.

okay all right all right so a quick intro to Backbase we have been more importantly what's on the slide we've been working with Navy Federal for the last eight years um probably I'll say the last six have been good ones uh the first two I'm looking at Tim and the digital team the first two we're trying to figure out the right right ways to fit right use cases but we've been you guys have been awesome partners with us, Took quite some time, most notably driving the B7 program that went live last year, rolled.

out most of last year, obviously driving a lot of the digital experience for front end for your members. I was just going to say front end, you guys actually still develop a lot of your own journeys in front ends. But that's kind of the beauty of our technology, of our platform, is that we provide most of what you need out of the box, you guys can take it or you can build on top of it, which Navy's chosen to do a lot of your own journeys, so you're able to own that experience. But what that does now, now that it's live on the retail side of things, is talk about.

how can this become more omnichannel, how do we go out to different groups of Navy and try to bring in, say, NFIS, for example, into that, when a member comes into their website or their accounts, they're able to also see the broader relationship that they may have with Navy Federal. Or it gives NFIS an opportunity. It gives them an opportunity to present offerings. or become an option that perhaps the member had not otherwise thought of. So we are global, and that's what this slide is here. We have vast experience, frankly, in Europe and APAC when it comes to our wealth platform.

and wealth experiences. In the last two to maybe three years, we've been investing more in the US and North America market about what that means here, and that's part of the discussion we've been going here. But what you also see on this slide here is, different you notice there's all different front ends and that gets back to the ability to create your own or have your own your outcome on what your experience

looks like in the market so you don't have so you look different or you are different than the competitors or you can.

obviously mold this or you'll do this in a way that makes sense for how you interact with your members so um that is kind of called the beauty of our tech of our tech stack or our platform is that you're not not you're not locked into what we give you you're able to build something that really fits best with how you want to be presented in the market so just visualize a world where your members can access something like this but doing it from perhaps you know their deposit accounts or their retail experience and help everyone get more of a broader view of.

the members entire experience with maybe so, hopefully that sets the table a little bit about some of the potential value, um why that's there i'll skip these my or that's i i think more importantly they start to understand that you know why they're here and launching from the work we've done so far.

yeah and to that could mean for an fis yeah i think just on a very high level what we are trying to do and why the one of the reasons why if you remember um with molly with matthew the that's our goal that's our vision as a company removing the front line fragmentation across different channels and make one platform which connects all the way from advisors, to branches to call centers and your mobile apps you know so really creating a more unified.

front line as we call it and a unified operating model that is a vision, with the platform we are not the systems of record, we are a system of engagement just to be just to make it very clear and apparent um yeah this is basically our wealth suite again just on a very high level we have prospect apps client apps employee workspace and ai engagement the dark blue box that you see on the screen which is from acquisition activation retention expansion is a platform layer which sits on top of your pms.

system cms any other fintech market marketplaces or any systems of record, the objective is always to decouple and help you to own the experience all the way from the end prospects clients to employee workspaces and ai engagement that's basically the objective and the goal i hope i gave a very quick and a high level overview of who we are any questions, i will pause um before i move on to the objective of session today.

no question, thank you.

Yeah, okay cool. So what are we doing? I think it's important that you just level set because there's again some new folks on the call. We're doing a program with Backbase which is called Ignite. This is our way of working with some of our top clients where we benchmark the baseline value drivers. It's an executive engagement sponsored by our CEO. I'm globally managing this team which we are

basically running, value drivers understanding your problem statements uncovering what would differentiate.

and how can we help you and build the right digital use cases and employee side use cases if any real business cases build road maps on the digital side uh for uh for you and an architecture blueprint so that is the output outcome and output of this whatever 12 sessions that we have asked for today's session is the first session which we call as executive alignment in the executive alignment i will explain you what we intend to do but the final outcome and the output will be this, use cases that we think we can help you with benchmarking the baseline value drivers where.

you guys are business case and roadmap for the next two to three years and an architectural blueprint that's what we are intending to achieve. Well, this is just me giving a vision to this program saying, you know, how can we elevate NFIS as in from an affiliated investment provider to a primary investing platform for NFCU members through a co-defined strategy and a digital roadmap for this is the program objective. And I think I know about the TWV initiative that you guys are running, the transition to wealth building. We have been working with Chris and team having a full understanding of that program.

But what we really intend to do is to go broad now and understand your whole business, not just the digital investor business, but also the advisor led business. That's why you see everyone on the call. We requested all the team members to come together and have this discussion. So the objective of today's session, aligning on the vision that you have for NFIS. how is your current performance across both the businesses digital investor and advisor led, and we want to really understand where the value is and where value is leaking and what matters that we can address together right i'm going to run the workshop as a facilitator.

sham is also along with me there will be a lot of questions uh and then we will this is still very broad and then we will start narrowing down into all the way from capabilities processes processes journeys and so on so that's the next 12 sessions and we'll come back with solutions, business case and roadmap after that i'm going to take a pause before i jump into the session itself any questions cool thank you, So so the agenda for today session objective and context I've already given you that we would like to understand from you your wealth vision.

Then we will go with the current performance and key metrics, We did send you some of the key metrics We also have some questions around that whatever you guys can provide would love to know then we move into end-to-end client lifecycle review from Acquisition activation expansion to retention. How are you guys doing? We have specific questions We also have because we have some experience on the industry. We have put some hypothesis, That if it is a problem What would be potentially potential root causes for those problems and we would like to have a discussion on those root cause problems now.

The session is divided into two digital investor first and then advisor led later, So my request is if people who are on the call who want to drop off, you know, come back later after one hour for advisor-led, it's also fine. People who would like to continue on the call, it's also okay. Right? I just want to make it very clear if people want to use their time in a better way, we have split the session into two businesses and so on. So this is what we understand from the last few sessions that we have had. There are two propositions, digital investor and advisor-led. You guys have been doing great on the AUM growth. However, there is still opportunity for you to do more.

There is still opportunity to reduce the investable asset outflow from NFCU and improve the NFIS versus external brokerage split. At the same time, the adoption for digital investor has improved in the last few months and few years, I think year if I'm not wrong. So that is also going pretty well. Right? This is what is our understanding as of today. So we just want to validate that before we move on. Yes, no? The answer is yes.

Michael can probably speak a little bit to the AUM growth that's been certainly strong over the last year, digital investor adoption, I think we had a really solid year last year, there are some areas with regards to member churn, I think there are just some real opportunities there for us, and then you're correct in terms of reduced investable asset outflow, and improved the split, so that's definitely a huge area of growth. So that's definitely a huge opportunity for NFIs in general.

We will go into more details as we start uncovering some of these things. Unless Shyam has any questions, any follow ups, please, Shyam, please let me know. Okay, cool. Now diving into your vision. So we would like now for the next 15 to 20 minutes, we would like you to speak about what is your vision for digital investor? Anyone can take the lead. If it is Diane, if it is you, Mathu, I'm not sure who is owning the business. So from now and three years, what is the vision for Digital Invest Tech? If there's any slide deck that you would like to share now.

or speak about it, it's an open session, economic intent, member value, and the definition of success, in the now and from three years from now. I'm gonna take a pause, I'm gonna go on mute, so that you guys can speak more than me. And it's fine if it is unstructured. If you have a structured deck, it's also great.

Well, do you want to pull something up or should I kick it off.

You can, I can pull something up, if you let me share my screen and give me one second here.

Can you see my screen now.

Yes. Yep.

Okay. I mean, essentially, like, we have a vision for Digital Investor, I mean, it's to be the preferred and trusted digital financial advisor for our members' financial well-being by providing financial awareness, education, planning, and investment tools, enabling our members to take actions towards achieving financial security. Some of our strategic objectives is to continue member growth, improve member satisfaction,

improve memberships, financial health, or health wellness may be another word that folks may be familiar with. And then just maintain highly competitive products and services.

So quickly on that, so Molly, a follow-up question. So when you say improving membership financial health, how do you track it? What's the measurement? If there is something that is going to come later, it's also fine, we can park it. But how do you define membership financial health.

I think that's an area that we have opportunity to improve in tracking and stuff. But I think it's growing members' assets and moving them from one segment, seeing them grow into their assets grow over time.

Interesting. Just a quick follow up from you, Molly. When you say investable assets, are you referring to this being across different asset classes regardless? Because I understand the digital investor platform is more either self-directed trading slash robo-advisory sort of model, right? Is your expectation that when you say financial health, that you're still referring primarily to their exposure across different asset classes? Or is it also combining things like that, insurance and pension and some of the other more financial planning related.

Yeah, and I think it includes all, but we're more responsible for the investment side of that financial health, but there is a big financial health picture.

So it does include like... Go ahead, Matt. MSO, I think I saw Michelle join the call again, but MSO... This is one of the key metrics that the enterprise is interested in setting up and establishing. Because we do a lot of work, we get people engaged, maybe they're not acting as quickly.

as we'd like to take the action steps that are needed.

So it is a question on the table for the entire enterprise. What would be a net promoter score for financial health, if you will? So it's being actively worked on at the enterprise level. In the meantime, I might posit for us, for Digital Investor, and all of NFIS writ large.

it's easy enough to track right like you well it wasn't it's not easy here but once we get all of.

the data together we can be able to track things like oh you had this level of deposits and savings at the credit union before you opened up a robo block ira you know account for example and now you've taken out a normal loan and now you've you know now you're um using our mortgage services and now you're opening up a 529 plan like how is that relationship uh deepening not just within, you know um nfis but as the number being now turning into a smart borrower as well as right.

you know saving investing yeah i don't know if you have anything you would want to yeah.

i was going to say it's like it's one part how are we enabling members to graduate to more complex vehicle products and it's one part how are we maintaining share of that financial health group, growth right if our deposit, products are helping our members grow into investment products that they're choosing to take up elsewhere, that's a missed opportunity. And so I think both of those become important. And I think the investment share is sort of implied by some of the other strategic objectives.

that you guys have. And I think both parts of that become really important as we think about how this grows.

So what we're saying here, what Molly is saying here as well, the firm is working this out. We have an opportunity ourselves to take a look and say, okay, what is the definition, of financial health? And the advisor-led side could say things like that. They seek their appointments with us, things like that, but what is, what does constitute vendor's oil? It's easy enough to start with the assets are retained within the institution somewhere.

Yeah, and you see them hitting those different stations of life and keeping the assets here.

For me, for a digital investor, it would be like, well, how many of them are signing up for automatic deposits, exactly, like, you know, even if it's five bucks, you know, paycheck, that would be one idea that I have about for a digital investor.

Yeah, just piggybacking on what Diane and Justin were saying, to my knowledge, we have not defined an enterprise financial health metric. It's very complicated for many different reasons. But I think it is an admirable reason. And part of the reason, the raison d'etre for TWB is like keeping the assets in house. We see a lot of considerable funds flowing out of the credit union into Robinhood.

Schwab and those folks.

I think I just have one follow-up question which is particularly intrigued by what you mentioned which is engage with the customers a little bit more and try and have a few more meetings because what we see in the market usually is typically if you

want to be able to advise your customer on holistic financial health, you would typically need to have a conversation that is a relationship manager slash frontline effort that you're putting in obviously to gain that trust and confidence and build that credibility with the customer to then be able to allow you to either, improve their net new AUM or think about different products that would diversify either their risk exposure or add on the product. So my question is going to be typically in a digital investor model, what we notice is that it's more self-serve and self-directed. It's nice that when we did a little bit of research, we understood that you're not discriminating between the two as in you offer the customer the option to choose between.

Whether they would like the digital investor or the advisor, and of course AUM is associated with that. But it's interesting, since you mentioned you would like to have a little bit more engagement. How do you see engagement being driven in specifically the digital investor type, not withstanding that it's a self-service proposition.

I think overall it's been some sort of a deepening program where we're deepening our relationships with our members, not just strictly focusing in on a self-directed automated account, but, trying to reach out, have outreach, deepen the relationship, because that member then, would stay longer with digital investor, and then some way, somehow in the future, maybe that flows into the advisory channels, they've improved their financial health.

And just to add on to that, like, I feel like there's an aspect of, like, we have to humanize digital investor and have, like, feel like it's a human interaction, but it's really a digital interaction. And so, and then bring in an actual person when we really need a person in that experience in that moment. So, you start to see more of that blended model of, you know, it may have started out strictly digital, but then now I have more of a hybrid approach where I might be having conversations with a financial advisor.

So, that's, like, kind of longer term is, like, but it needs to be dynamic enough to be, like, meet the members needs. Every member needs, wants to interact with technology or people differently and have that flexibility to support those kind of individualize, make them feel. Individualized personal experiences, even though it may be the same experience that the majority of members have.

Molly, we would love for you to continue that slides. It's fine if you can just show us a little bit of what you guys are doing for the next two to three years. Thank you. Okay.

And then, like, I mean, I want to skip to, let's see, I mean, this was just kind of this slide. I just, you know, I'm repurposing this deck, but kind of like where our strategy is kind of focused, making sure we have those seamless integrations within all Navy

federal experiences, you know, deepening in the areas of awareness, education, planning, and investing, that humanized, model kind of I've talked about, and then just maturing to get it to feel like individualized.

experiences and just having reliable technology. And then, like, I think I'm going to jump to, like, when you, because you asked about goals, right.

Like, goals and also the slide five is still interesting because, yeah, how do you win? What's your advantage here.

Yeah, so, like, I know not all of my leadership has seen this slide. They've seen aspects of it, but I've matured the slide since then. But, like... um how do we look at competitiveness right like how do we win i mean price matters um what model are we going to ideally realistically i mean i mean i'd love if it was free for everybody and we found out different ways to make money behind the scenes to support this but like we're offering, this digital investor platform for free at some point but i mean we're not there um and then just.

being like a low cost you know low cost solution and then really making um it simple um taking the complexity out of processes you know some of those making into single steps that maybe are powered by ai whereas today i might have a member that has to complete a form there's back and forth on transferring assets in well how do we make that super simple and you know them confident in those processes um, And then us not feeling so stand-alone digital investor on an island, you know, creating it and making it seamless so it's super integrated with your banking, checking, you know, CD was like a CD comes up for renewal.

Is that the right time to invest? Is that, you know, so just what are those, how do we make those experiences a little more seamless and not seem like I have multiple steps to make something happen? And then show them that we know them. So, like, when really, like, the, you know, the experiences that are personalized, you know, when something, because, right, we have a relationship from a banking perspective, maybe life insurance perspective. We know when certain things happen that, you know, how do we create experiences that show that we really know them and have a relationship with them.

And then just I think we need to get to some. innovative product solutions that are more cross-product versus, like, we just have investing accounts today. Like, how do we partner with the other product lines and create some products that maybe are more comprehensive, inclusive, different features on them, and then just kind of reinforce that we are one Navy federal and, you know, really leverage the strength of our brand because I think, you know, Navy has a really strong brand.

And, you know, we need to be taking, you know, showcasing that more as well. So those are some of the ways that we think.

Yeah, let me just add a little bit of buzz. sorry can you hear me um i just wanted to add a little bit about uh molly's last point so i think what she has here is a really good i think encapsulation of what we we want uh but it's really the last point right which is that we want members to know that digital investor exists and this is sort of like a natural graduation point for them depending on where they're at in their journey right so you know just back to what justin was saying is that that's that's a leap that a lot of members have not made uh you know digital investor just simply does not have you know.

terribly high visibility uh it's not known it feels kind of like a little bit of a standalone product um you know you know when they get exposed to it i think for the most part they're you know they're pretty happy they're pretty satisfied um but a lot of members from what we've seen a lot of members actually would have a preference to keep their assets and the relationship with the credit union especially like the long and tenured ones um you know the younger members active duty etc like they just, it had to just trust that brand and so this is, It's something that they actually would be drawn to, but we just haven't really made.

that leap in a really hugely successful way. So I think that's the huge, huge, huge opportunity for us, and you know, there's some tech ways of doing it, you know, some of it is branding, some of it is, you know, there's a whole bunch of ways of going about it, and we probably need to do, like, all of them.

One of the sessions we had in the fall, maybe it was Chris Tams, the big thing was just awareness, right? And just, in Catholic, it's a lot of technology, marketing, branding, education, all of that, which is awareness, the members don't know that this is an option or that it's there when they're signing up.

Yeah, but that's true of all of them, I guess.

Yeah, I mean, part of the problem is because it's a credit union, right? So I don't think a lot of people join credit unions thinking that they're going to invest in a credit union. I think they do that because they want good rates on their loans and mortgages. They definitely want great CDs, like that's something that everybody knows. They want to save money. The investing piece, it just feels different to them. And so somehow, someway, we have to try to close that gap. But NFIS, we are just starting from a magical disadvantage because people don't go to credit unions for these things.

They tend to think of that as a more Wall Street or Robin Hood type of thing. But that's the opportunity.

I think the same time, while they might not come to us for that, the opportunity is high. Because a lot of the members that are doing their day-to-day banking with us are primed to grow into those types of services, and I think we can position

ourselves competitively to be that sort of first investment provider of choice as they move into that life stage and that kind of disposable income. Exactly.

Matthew said, for what it's worth, that I think, What is best, truly best in class that makes you get out of bed and be like, I want to put $5,000, $10,000 here about NFIS is an important part of the story. You know, you don't have to be great at everything, but if you're great at, if you're best in class in some things, like I moved a chunk of my parents' investment here because I felt like the return on the Kestry account was really compelling, like in a way that most offerings are not.

Like, I think, you know, if we can tell that as part of the story, I think it's really hard to compete out there with, you know, the brands like Vanguard and Fidelity that have such strong established brands. I think winning at home with our current members is really critical and converting them, which we've implied before, but, you know, it's really, it feels like it's ice skating uphill to go, to try to, you know, pull in people from outside, and it feels like we should be starting, you know, in like, and really converting those here.

One question that I had was around the fees. And I know it's a perception, value perception that is there in the market. You know, a lot of these accounts, a lot of these players are giving it for free. When I did NFIS and I just did NFIS Reddit, and I was reading through the reviews on Reddit, there were some comments about the price. So I just wanted to understand, you know, how is the pricing decided?

And what is the perception of the member when it comes to this pricing? Is there some research study that is being done? Yeah, and what's your what's your view on moving from that to that free.

Definitely, I can answer that Howard, so that I guess absolutely on the sub-connection side, a lot of them do offer it away for free, you know, this is the pricing model that we created when we first came up with Digital Investor. So the first thing is this is that we are open to different pricing models, we're certainly open to look into, you know, giving this away for free, perhaps doing more on the robo side, right? So generally, what happens in the marketplace, when you look out there, is that self-directed accounts are free, any managed account, which is what our robo would be, is where firms.

will generally make all their money on it, for the most part, they charge an AUM fee. So just you know, just basis on the bids on their assets, a lot of them will enforce things like minimum account balances, you know, to ensure that they're getting, you know, you know, whatever amount of revenue that they're looking for. We were going for I think transparency. and really low cost as possible right so on the automated side on the robo side we're like way below market of course on the self-directed side we appear to be way above market now those firms.

do make money in other ways on self-directed right so their accounts are not actually free it's just that the member or the customer themselves are not you know paying out of pocket uh for it um internally we've certainly been talking about it you know what can we do um what should we do uh we're open to ideas we're open to aligning more with the industry we're open to other kinds of things you know you know like molly was saying you know maybe we can subsidize these accounts in one way or the other you know we can certainly talk about a different pricing.

model for uh the robo side and get rid of the fee of the self-directed side and there's any number of things uh that i think we would be uh we would be uh certainly open to cool thank you.

cool.

i think we could we could really help there as well because uh as i understand that while you charge three and a half dollars a month you also offer like up to two thousand trades uh two thousand shares per trade almost free right and then so a metric like that to see how many trades in terms of transaction volume go on about two three two thousand uh stocks but it would be interesting another thing that could be interesting is in the robot rising space typically the aum percentage is around 0.2 0.3 to 0.5 percent of a1 again depends on what sort.

of ticket size i know in the digital investor platform you don't really have a minimum balance of course that is a differentiating capability but uh once we get some of the metrics on you know what is the average aum per client uh at what stage to invest uh we could we could advise on how pricing could be better uh definitely yeah i yeah.

what's that kind of.

No, I just had a question since you mentioned reinforce the one Navy Fretil. I'm curious to know, I know today that when a customer on NFIS gets onboarded, obviously they have to have an NFCU account. I tried onboarding myself. You have to have an account before you can originate this product, which is also in one way awareness. But at what stage do you think it's best to introduce this product, right? Because the way we see it in the market, sometimes it's during payday. Sometimes, in your case, because I know you're super heavy on member-centricity,

it could be a PCS or a military event, life event that's happening. It could be some sort of windfall that happened. It could be IRA season. It could be any of those, right? So at what stage do you today find yourself integrating with the larger NFCU proposition? And where would you take this.

All right, I'll take a stab at it. Molly, I think, might have some things that she wants to say as well. Today, I don't think we do a great job of proactively integrating ourselves into a member's experience, you know, depending on where they're at in

their life stage, right? So, you know, if somebody's having a life event, you know, we don't necessarily know it, and we're certainly not doing a whole lot to integrate digital investing into that. The number one way that people find us today is actually to go onto the mobile app. They'll see the digital investor link on there,

and that's how the vast majority of the folks that we're seeing today find us. So it's all organic, right? It's all literally just people finding us, and, you know, they come in, they sign up, et cetera. They do the whole tapping. There's a lot of opportunity around that, right? So of course, if we look at the life cycle of a member who has a relationship with a credit union, right? A bunch of them are buying homes, a bunch of them start families, a bunch of them change careers, a bunch of them move towards, you know, retirement, a bunch of them might face where they're building wealth.

In each and every single one of those phases, you could certainly make an argument that digital investment belongs there or some NFIS experience belongs in there. So to whatever extent, so when we talk about having like a one Navy federal experience, that's what we're, like that's kind of like what we're envisioning, right? It's like, so how do we A, figure out that members are going through that, and then B, introduce ourselves to them in a way that is helpful and valuable to them. One thing I did want to say,

which is I'll try to interrupt you before. When you think about digital investors, so we have Self-Directed, we have Robo, and two to one members select Robo over Self-Directed, so that's something, I think that it's important for you guys to sort of keep in mind is that automated investing, global the managed account is, members, you know, when given a free rate, there's no cost difference between the two accounts, on a two-to-one basis, they select automated investing. So I think that should tell you something, a little bit about how they want this to be easy, simple,

there's a very good chance that, you know, the majority of members don't actually want to pick stocks, they just want to be wealthy. You know, they don't need to sit here and figure out whether Tesla is better than Apple, right? They literally just want, you know, 20 years to make up and to be okay, so how do we make that easier and better for them? You know, maybe the self-directed thing is just, you know, like a little fun thing for them to play with and, you know, maybe we give that away and, you know, and then, you know, we get more serious about, you know,

automated investing and the fee structure around that, so, in terms of integration, that's what I think, but I don't know if Marty had any comments.

I would just add, like, on the reinforcement of that one, like, you know, when we onboard new members for Navy Federal, like, where we are introducing, you know, they come in through, you know, mortgage or a banking account, like, when do we

do that introduction of, like, hey, these other products and services are available? I know we have some opportunities in that space to make, increase, though, the awareness of digital investor and what we can help, you know, help them in their financial journey, too.

So, that being one of the other places that I think, you know, we have some opportunity, along with what Matthew mentioned.

Go ahead, Chris.

Sorry, Jess. With TWB, we have developed a model late last year. That we hope to really start putting through its paces and seeing how it works, where we... both at people who are transferring money off of us to external brokerages and based on that we have developed a model that kind of tries to identify people we think, are similar looking and will move money off of us in the future or in near future and mix that with.

a separate model that looks at who we think has building wealth as a financial goal so um i think the opportunity there we we've started taking steps at uh also trying to identify some of these folks and then um i think building out an experience around that is is uh where we hope to kind of test that more um right now we are starting to deploy it with our call center folks as an insight in other words like these people that we predict might be eligible like it'll pop.

up to a member service representative like hey this person might be interested in this and maybe you can talk about like nfis um but really i think that where the thread will be buttered is um perhaps using a model like this to do to properly intercept people on the digital experience.

And very basically, the credit union has a process of onboarding new members and onboarding, you know, and so how we, last I wrote, excuse me, we're not introduced in any way until like the 18 month mark or something like that. So like this, there's been a lot of talk over the years, you know, about how to introduce a new member to the full suite of opportunities that the credit union has to offer right at the start.

Is that a deliberate choice that you, NFIS or the products are introduced 18 months later or.

But I know it's a long time after, which is why with Christmas in June, that now we have the ability, you know, building wealth is consistently at least the number three choice, if not higher, of any new members onboarding. So that has helped the rest of the organization say, well, wait a minute, we need to be pretty sure we're presenting the right kind of content.

Yeah. Well, the question, I might have Matthew and... As you guys think about what this one maybe federal looks like in terms of deposit products and investment products sort of coexisting a little bit more together, are there others in the industry where you look at them and you're like, oh man, those guys are embracing the idea of a one unified experience really well? Not that we would want to model anything we might build off of a competitor specifically, but sometimes that stealing the pride can be a really helpful way to ground our thoughts. Is there anyone in the industry that you think is doing that really well.

Yes.

All of them.

I mean, it's a really hard one. I credit you. All of us. Yeah.

I would say, like, the person who is probably doing it best, Molly, maybe you can correct it. At least from my perspective, JPMorgan seems to do it better than anybody else, is that they really do expose everybody to, like, their banking side, their investing side, like, everything. They kind of, like, just bring it all together in, like, a really good way. You know, a company like Robinhood, I mean, obviously, they don't have, like, a big part of the banking side. Right. But they do, like, a really good job of also just exposing people to, you know, the different things that they offer, you know, whether it's, you know, crypto. And they're doing a lot in retirement, right? So, you know, initially it was all, you know, thought about, like, means, stock investing.

and things like that. Yeah. But now it's sort of, like, you know, more retirement. They've introduced, I think, a credit card, a gold credit card recently. Yeah. So, you know, they're putting all of that stuff together. Yeah. And there are a bunch of others. Allianz. Yeah.

I can move money between Bank of America, my Bank of America checking accounts, and my cash management accounts. I don't just liquidate assets, but I can move money around, you know, on my own, right in the app.

That's nice. Sorry, I'm just doing a time check, if you want to bring in, yeah, go ahead.

No, I just wanted to ask Molly to present that last slide before we move to the some of our, some of our hypothesis, yeah, this one, slide seven, goals.

I mean, so essentially, I mean, and some of the numbers are, like, we're at a little more than, we're closer to 115,000 now. This slide hasn't been updated yet, but members today within Digital Investor, I mean, our goal is to get to 800,000 at least by 2030. So that is one goal. Member satisfaction, right now, I think we're sitting at,

like, 58%, you know, of members, you know, doing the surveys we get. We want to grow that to be, like, 75%.

So we know there's some feedback that we've been getting, missing capabilities, and we need improvement experiences. I think that will help us get there. And then just from an engagement perspective, you know, how do we determine what engagement, you know, is the right level of engagement? Because, right, when you have an automated account, it's kind of like, you know, do I set up my recurring deposit and forget it? And, like, I just let it go and grow. You know, so we have some work to do, I know, on engagement, but we need to gauge. What is it? Does the engagement look like? Like, does, you know, some of the things that I think we know we need to improve on is increasing when do we alert and have notifications, showing that we know them that something, you know, related to their financial aspect has changed, that we need to be communicating about them, you know, sharing with them, hey, they've made progress on achieving a financial goal, you know, and letting them know that or they're behind, what do they need to do to catch up.

And just really having, like, a true digital integrated financial plan and having a digital financial plan, and that's something that they can interact and engage with. So those are some of the goals of which, you know, we're after by 2030.

So to go back to pulling this, like a little bit, so for example, when we can tell, we know when a member has paid their last college bill, right, so how do we, we know that's coming, this was a planning conference story that was told, right, so we know when that's coming, we see that, you know, the member's been paying and they're getting close, so when do we start saying, hey, you know, before you absorb that $400 a month, you know,

you've got some choices with this money and here are your choices and here we can help you digitally, you know, I'll figure this out, and oh, by the way, can you help with the chat button, right, and then we can hopefully get that member who is, you know, demonstrating good financial behavior already, like to continue to take that next step into digital investor, for example, and you could do that with, when you pay the auto loan offer, you could do this when you, you know, You know, any debt that you pay off, you know, it's like, it's an amazing opportunity, right.

It's like you're into that snowball situation, right.

Yeah, you know, all investing is is helping the person find the dollar. Right. You know, and put it into work.

This is Mark. I'd like to raise, before we move on to the hypothesis, I'd like to raise one of the biggest challenges that I think we have with digital investor, and I think it's somewhere where Backbase can help us, is sort of what I call the pull-through through the funnel. So we get lots of acquisition to digital investor.

but what we don't get is funding.

We don't get people to move their money over into the account. We don't get people to start investing. So we've got quite a few accounts that are unfunded. So, you know, I think that's been a huge challenge and we're trying to figure out how do we best improve that. But I think that also deserves mention here. Interesting, Mark, could we double-click on that a bit, do you know why.

We have that later, right? We're going to speak about that. We're going to speak about the life cycle and we will go through that in detail. But maybe, Mark, you can quickly glance through the root cause or something.

Oh, yeah, I was just going to say, I think the biggest thing is, she mentions here alerts and notifications. Like right now, we don't have great capabilities to make sure that people, once they've signed up, that we're pulling them properly through the process to get into funding. We don't make it, you know, we make it fairly easy for the money to move over. But, you know, there's sometimes there's some disconnections with the credit union on whether the money's still in their account.

The credit union or not, because it takes several days to transfer over. So I think there's issues that could be addressed in the communications and the alerts notification to get people to move through the process. But then I also think we can improve the money, the money transfer aspects of it too.

Yeah, just to add on, like, I mean, to give you some data points, like, I mean, we know about 10% are closing accounts within that 30-day free look period. So, they open the account and they close it. So, we know we have opportunities there to communicate more, tell them the value, right, invest and, like, put in the funds, you know, how our tools can work for you and help. Because, obviously, they're interested. They took the effort to open that account, but then they're just not following through. And then about 50% of accounts that closed last year never funded their account.

So, like, we know, like, actually moving of the assets, right, so does that mean we need to have some changes in our onboarding experience where you fund it when you open an account? But that's a little, you know, there's some things that we definitely need the improvement on of, like, how do we get people over, you know, feeling confident. Really, how do we make them feel confident to move the money over and then it's going to start working and investing for them. So, those are just... you know, some of the challenges that I know we have, opportunities, you know, right out the gate.

Because we're opening a lot of accounts and then just turning around and closing them. Yeah, yeah, clear.

Thanks, Molly. I have to quickly move to the next section, inside Digital Investor. So thank you for giving us a quick brief on the vision. I think we, this is just our vision to value map. We normally put something like a vision to value map, which is, in this case, it's a little bit inspirational. We will also change this and tweak this as we get more information from you. But to a large degree, what we have observed is that you want to retain and grow member investment assets within NFCU.

Making digital investing a trusted everyday capability, positioning NFIs as a primary investing destination for members. So very similar to the things that you've already mentioned. I have just put that into a slide so that we are on the same page. The more important thing that we would like to also discuss is just the metrics right. I think on the right side what you see are the metrics on how many and what we the most important the question that we have for you is what are the metrics that you guys are tracking today and what matter to you. So for example for growth and retention how many NFC how many what's the.

percentage of NFCU members opting for NFIS, the net new AUM, asset retention rate and wallet share per member are these important if they are yeah I mean what's the priority in this you already spoke about the percentage of digital accounts funded, member activation engagement rate, revenue per digital account and then fee income per member, attrition and satisfaction to value for fees. Do all these metrics matter to you and from an improvement standpoint what are the ones.

which I can take a pause what are which are the ones which are most important for you to improve.

Alright, so what I would say right off the bat is this, right, so the revenue per digital account, the fee income per member, those ones are with downgrade, and we definitely want this to be, this whole program to be an economic benefit for the credit union and our members, but we're not necessarily looking to maximize revenue per the digital account, right, so which is why we're trying to be flexible about our fee model, for the benefit of members, not so much for the benefit of ourselves. So maybe there's a little bit of a...

I think that we just need to clarify. In terms of the rest of it, it's really about engagement, growth for sure, net new AUM, asset retention rates. I would also put in some metrics around engagement, the number of accounts they open, how frequently they're funding their accounts. To Diane's point, if somebody's putting money in on a monthly basis, whether it's five bucks.

or 10 bucks, that's probably more valuable behavior than somebody who's opened it. They might have put $10,000, but they've never reopened their accounts again. So we'd rather establish those measures of behavior. I personally would like to see people feeling like they're also getting educated and wiser about investing and how

to build wealth. So we do have an education center. It's pretty new, so we don't have much by way of stats in terms of people actually, reading things, but there's some way of just being able to measure, you know, are people.

getting wiser? Are they feeling more confident? Are they feeling like they can achieve their financial goals? It's not this big, scary thing. And certainly anything that, any way that we could sort of trip up the wire that causes people to move from Navy Federal to move money to like Schwab or Vanguard or Fidelto or whatever and instead divert it to us, anything we can do there and that we can measure that has a positive effect on that, I think would be important to us.

Cool.

Any of these metrics are linked? I know that member engagement, because I was part of one of the sessions for managing household finances and member engagement was what the whole organization is also, I think you guys get paid bonuses on member engagement scores, if I'm not wrong. Was that the one? I think that's what was told to us in one of the MSO sessions. I know member activation and engagement rate is important, asset retention, and now I just heard about percentage of the digital accounts funded, right?

That was one of the key metrics that you just mentioned, and that is not happening to the same expectation level, correct? Yes, simply.

Yes. Yeah, the percent of digital accounts funded is not at the expectation levels that we want it to be. Yeah.

Got it. Cool. Shyam, any follow-up questions, or should we move? Because we have five minutes before we move to the...

I know, just maybe putting the cart before the horse a little bit, but given that you have an advisor-led proposition and a digital investor proposition, just curious to see, where are you seeing net new business coming from, or net new AUM coming from? What do you see more of.

I mean, AUM, yeah, yeah, again, the AUM is coming from his side, yeah.

I think the growth in accounts has been more on the digital investor side, but the revenue and the AUM has been on the provider side. Is that fair.

Yeah. So one thing to keep in mind, one thing to keep in mind in terms of targeting, right? These are two programs that target somewhat different people, right? So digital investor is really for cheap, easy, low cost, low entry, zero minimums, right? And working with an advisor is a much more involved process, you're building a relationship with an actual individual, you're talking about things that take time, obviously much more care. Those kinds of members tend to be pretty different places, and there are minimums, right?

An advisor is not going to work with somebody who would have a hundred bucks, right? So they're very, very, very different. So the way the business is split is actually what we would expect. That's the growth in accounts would be digital investment.

Yeah, from a number standpoint, our AUA is about $7.4 billion. Of that, about $500 million is digital investor, and the rest is from the advisor side.

right um this is just you know i know that you don't need to have all this information now i think we already spoke about this but this was just an attempt to understand uh where where is nfis today i think we already spoke about the nfc members we spoke about activation and funding how many are funded within 30 days uh what's the best in class and what's the challenge this is just also showing um what do we observe in the market from a best in class standpoint from a worst in class standpoint this is also what we will bring in our final report but what we would like to definitely discuss with you uh either now if you don't have the details now it's also fine.

but at a later point in time where is nfis for these metrics that we just discussed. Do we have these metrics? I know that we have the top three at least, or the first two, but the other ones like re-engagement, asset retention, first action, some of these metrics, are you tracking it, and where are you guys standing today.

I do have a question. On the first one, you say for the percent of NFC members opting for NFI, say that big mass is 8-15%. Are you talking about 8-15%? Are these banks? Are you looking at banks.

Banks, yeah. Not credit unions, banks, yeah.

Because those are not the numbers that we necessarily benchmark. I think what we generally see is that if you look at large financial institutions that have investment programs, it's generally around like 3-5%. of their banking customers that have a relationship on their investment side.

On the credit union side, by the way, these are also reports coming from HUNA, Seri Lee, CU Belts reports and FINRA broker dealer benchmarking. The thing is this is, to your point, we do see in credit union space it is less than 5%. If there are any credit unions who are trying to offer investing as an offering, then it is less than 5%. With some banks, we have observed 8% to 15%. Globally, I think, Shyam, you have also seen about 25%, right? For banks, large banks.

Yeah. Yeah. Maybe you can give an example, Shyam, of the Asia market.

Yeah, so large tier one banks, so we work with, you know, of course, as backers, we do work with clients globally. We have somebody in Malaysia, large tier one bank, who has a similar proposition. Of course, they're a bank. and they open the digital investor slash uh wealth management light wealth management proposition for

more of their mass affluent customers and that's defined by having 50 000 usd, and upwards right and so for them um it's at 25 yeah but i think the the strategies that they.

apply are actually very different yeah yeah so maybe we should just french people that are.

um like i don't know i know more about like india than i do malaysia i'm just gonna like i don't know like i i just know though that there are some countries right that um wealth management is not actually an option like it's not really a separate option i think australia has uh you know some of these constraints that are very different than what's happening here canada you know there's no uh there hasn't been for a very long time you know, significant walls between banking and brokerage forever you would walk into your bank branch and.

be able to do brokerage that's why tv bank was is trying to infiltrate the united states to to create this model here i do know here and and it didn't happen until 2008 there was still a resistance you go into your bank to get your money out because that's the only way you get money right and you go into your brokerage to deposit because you don't there wasn't a way to get your money out right and now all of that has been blended together a little bit but i think americans behavior you know to matthew's point earlier too is you think you could bank one way and you think.

of your brokerage and we are investing another way still but the mobile app that's why we have the biggest success that has changed everything and the younger generations coming up right it's like all on this thing so i think that's very interesting statistics but i think it could be um, Maybe smoothed out a little bit, you know, just so we could see what we're really looking at here, more apples to apples, if you will.

Fair. I think this is also a discussion from where you are today. For example, we know that you have 800, how many accounts did we say? 800K, right? 800K.

We have a couple of accounts right now. Yeah, it's about 1%, right? If you look at 15 million customers or 15 million members and you said you have 115,000, it's like less than 1% at the moment.

Right, but that's all of NFIS too. That's not just digital investor.

Okay, that's the whole of NFIS, okay. Yeah, but we just wanted to know where you guys stand today and is that something that matters to you? Because, yeah, you know, inflow is important. If this is a metric that matters to you, we would like to see how we can improve it. Activation funding, 60% to 70% funded within 30 days, less than 40% funded in 30 days. I think that's something that we definitely would like some of the information from you. We can discuss this later. We don't have to go

into the details now because we know that you don't have all the information here, right, available. Any of the metric that stands out which you would like to point out.

that's saying that, yes, we need to improve, apart from the first two that we already discussed, like retention and re-engagement. Any of these stand out and are most important to you, apart from the first two.

Well, yeah, I mean, and, um, ongoing engagement and asset retention, you know, are most important. The pricing thing, I have a whole different sort of, I'm not sure it's not. It's difficult to fight against, but to, you know, the other digital offerings out there are not free, and in the, it's just all hidden, you know, behind, it's like all those airline fees, you know, and parental fees, it's just people don't care because it's not like not right in your face, so also, most of them do not have any kind of human resource behind it, and we do, so we don't, we've been discussing this for a while, we don't tell that story, back to the value statement about what, you know,

why would you even want to consider this kind of thing, and we've never even had a chance to, like, test that. I don't even think I've seen any data that says, I get Reddit, you know, and they're saying, oh, wow, they charge a fee, but we haven't seen anything in our data that says, oh, everybody, nope, they're not doing it because we charge, you know, it's a bit too expensive, you know, I don't see it, I haven't seen it, that doesn't mean it doesn't exist, I mean, I'm just sharing, you know, put that in front of me and say, oh, you've got to figure out a way to, you know,

The only way you're going to compete is to get rid of that nuisance fee, because it is a nuisance. I mean, I think it is, but...

But it's probably not the biggest inhibitor, right? The fee probably isn't the biggest inhibitor right now.

I don't think so. I'm not sure. But I don't think so, and I can say, too, I think the bigger problem is people opening accounts, they don't have the money to move in, even though they said they do, or they don't move the money in, even though they have it. And so now we're charging them $3.50, so that's zero.

So that's where it becomes a nuisance for them. That's fair. Yeah, that's where it becomes a nuisance for them. So I think the fees to the extent that it's a nuisance or it's preventing them from taking additional actions, we definitely would want to look at that for sure. You know, on the robo side, the vast majority of the fees out there are like AUM fees. I'm sure most people don't really understand what an AUM fee is, and if you tell them what it is, they'll never be able to calculate it. But you know, 25 bips, if you have $50,000 in there, you're paying probably $300-$400 a year in fees.

You know, we're charging $3.50 a month, which is what, like $42 bucks a year, right? So, it's just that people don't have easy ways of comparing these things, right? But there is value that we're providing here, but it's not obvious, and it's not easy for us

to explain that to, folks, but what we don't want is our fees to be a hindrance for them taking additional steps. And so, on the self-directed side, there's no doubt about it that the Reddit folks are correct. These guys charge $2.50, or $3.50, sorry, and Robinhood is free, right?

Robinhood is not even, you know, they're doing it for fun. They have other ways of making money, yeah. But for them, it's like, nothing came out of sight, like, I don't really care about, yeah.

So, I just want to spend a little bit on re-engagement, given the number of ... I don't know, I mean, I'm not sure that that's, you guys, Molly, I like to hear, like, I don't know that that's... primary concern right now, versus getting the experience elevated, and maybe that will change, you know, that would change, you know, and then, you know, because to me, for re-engagement,

we can easily, you know, once we, oh, you know, we've upgraded all this, take another look, you know, like that, I don't know that it's a leading thing, but I agree with that.

So, I agree, I think re-engagement will come when we do these other things.

Yeah, I think the biggest ones would be then the activation part that we just spoke about, you know, awareness, getting more NFC members aware about it, and then the retention piece, right? We'll go into a bit more root cause of this, just being mindful of the time. Yeah, I think this is just a little bit of a member lens from a process standpoint, from acquisition to activation to retention experience. Expansion at the top. We already spoke about digital wealth discovery and entry, the key metrics we just discussed.

Some of the root cause hypothesis that we have had are some discussions with you, some discussions in the industry. Investing is positioned as a product post membership and not as a next step in financial life, you know So it is like once the membership is done like you just mentioned and you know in 18 months from now or maybe X months I don't know that months but in X months from now you're investing is position, but it's not position early enough, And therefore the digital wealth discovery and entry might be hampered right that that could be one of the hypothesis Of the root cause no clear of why now for members digital wealth feels disconnected from my primary banking experience.

And pricing is higher now. We already established that pricing is higher is not is not a root cause hypothesis for you But the other three, Might be true. Correct. That's what we have been discussing Are we aligned on those root cause and is there any other root cause? For the digital wealth discovery the first time discovery and then entry and people opting for it any other problems or root causes that you Have analyzed already.

Well, I do know we have, I mean, Chris can, we do actually now have data, which is why the credit union is really embracing that. They had a tried and true philosophy that only when you amass some wealth, you know, and you can handle risk, you know, maybe then we'll introduce you to investment services. But we have all this data that shows our members, you know, starting, you know, early in their 20s, early 20s, are already investing even though they have some debt. Like, people don't act like that, you know, if they have a.

Even if they don't have their three to six months worth of emergency savings set, they're still investing. So we have data for that, which I think can help support some of the other arguments we want to make about how and when and everything to build the awareness sooner or later when it comes to the digital investor. I think these are.

I think the point that you're making. They're not monolithic. It's not a monolithic group. I think you are seeing my suspicion is that a lot of the money being taken off of us, is going to a Robin Hood style kind of fintech, which, it makes you more male, it makes you more risk tolerant, and might be relatively young.

The only thing on here that I would probably downgrade is the cost per acquired investor. It's not something that we don't spend actually much, maybe even hardly anything at all. Actually, like dollars spent on marketing to acquire a person. I think we should. Yeah, maybe we should, but it's really about having 15 million people, the vast majority of you. We don't actually have to spend a whole lot. What we need to do is just put way more effort, like a thousand X more effort in just being more visible to them.

But yeah, we don't have to spend a whole ad money on them or anything.

Got it. Drop off and onboarding? Is that something that you track? Is that something that, I don't know if you track, is that a problem there that you have observed.

So I don't think people are dropping off and onboarding. I think people are not... To Mani's point, people are churning in the first 30 days. That's the one that's hurting us. But they are opening their accounts. I mean, I don't think that actual onboarding journey is going to be a problem. But there is churn, and people will just not deposit money after they've opened their account.

Go ahead.

I think Mayur's question was more from the point of, let's say somebody expresses intent on your website to understand more about the product, and then maybe when it comes to the onboarding step, they don't follow through on it. They just start with awareness of the question.

They express interest but did not start onboarding. Yeah. I'll be honest. I mean, they're not going to be able to see it.

Well, I mean, the only element that we have for that is, like, account open to visitor rate, that we've been tracking. So we're at, like, 0.5. I mean like we're about half a percent there, it just varies based on traffic, seasonality a little bit. So we are tracking, I mean that's the one metric we are tracking. Can you share that? No, people are...

Can you share that separately.

We don't have policy management, right? They go, they show interest and it's captured somewhere and somebody follows up with them. We don't have that.

Yeah, I mean I don't think, Molly, I mean I don't think people have a way of expressing, We don't talk about it, unless they reach out to us by chat and tell us, hey, we're ready.

Yeah, that would come into, like, lead management. Yeah, we don't have to put you in. The thing is that we could definitely pursue more of a, yeah, hopefully a half-day job. But I don't know that we have a good way or to refer from the branch or whatnot.

And we're all trying to have a reflection in that. We want people to just open, you know, and kind of, like, that's the whole point. We definitely don't want to add any friction in this. Only, say, what, 0.5% of them visited and decided only 0.5% of them. So, you know, there must be a bunch of them who are, you know, dropped off.

What about people calling customer support or member support in this case to either understand more or start somewhere? Any calls you're seeing.

Yeah, those are not great avenues because there are not that many people who do that, right? So when people are contacting us, it's usually because it's a problem solved. We have an outage. We have something happening with, you know, our back-end partner, et cetera. It's not that common that some people IM us or contact us to find out more about the product.

I mean, Tana, are you there.

I'm sorry, Tana, is that you there? Is that what you said? Yeah. You're kind of short. Are you seeing many people contacting us to find out about digital investment? Maybe just give them some insights as to, from your perspective, you know, who contacts us, what are they contacting us for, you know, what are the friction points, et cetera.

Yeah, I would say there's not, definitely not on onboarding, we get very few issues in the onboarding process, but I would say we might get 5% that are asking about,

you know, the actual website, what you can do. Most of them find that out themselves. I would think more of the pain points are just, you know, money movement, you know, site books. Now, I'm mostly processing times on forms and withdrawals with IRAs, that type of thing. Um, yeah. But yeah, but there's not too much on just asking about the website. I would say that's pretty minimal. Yeah. Yeah, I think there's a lot of what we're doing is reacting, and Patrick Ryan is on too, like, are investment advisors, do we get referrals.

We do see that when they get to an investment advisor, Patrick you can jump in, but the optimal solution is a digital investor account. But that's now being introduced that way to a member as opposed to, and then they take the action or they don't.

This is sort of like the one thing I would say that Digital Invest I think actually goes along really, really well is that it is actually like a self-directed experience and it's very obvious to members that this is a self-directed experience. I don't think at any point in the journey are they getting the impression that they need to call those contractors or whatever. So we've actually done I think a really good job.

We did onboarding. One of our employees is also an NFC member. So we did the onboarding for NFIS and we also did not find anything. really off or it was too difficult we could do it in eight to nine i think nine to twelve minutes, and we could start using the account so it was already sleep but we just wanted to understand from you if you have observed something that we have not observed right so uh we can move on i think we already spoke about the early value realization percentage of accounts funded within 30 days time to first funding time to first trade and trial to paid conversion rate i know you guys.

are offering 30 days free trial is that something that is uh that is tracked is that something.

uh either a problem or is it doing well um so that's the drop up that's it yeah um yeah that's. Yeah, yeah, they're talking about people, they, we call it the recipe. Yeah, clear.

So this is clearly one of the priorities. I'm quickly skipping through ongoing engagement and confidence. So monthly active investor rate, I think we spoke about asset retention rate and frequency of engagement. So there could also be root causes that there is no structure detection of early disengagement signals. Re-engagement is reactive. There's sometimes also what we at least observe gaps in investable universe, less stocks, this stock is not available and so on. Members are unsure what ongoing value they're paying for and digital experience does not.

evolve as the member confidence grows. So some of these are the root causes that we have observed for businesses similar to yours on the digital investor side. First question, is it a big issue problem at this point in time? Like you said, it might

appear later once you start maturing more, but if it is not, we can move on. Which one did you ask for that for ongoing engagement and confidence this this face.

Well, I think that kind of attributes to what we see and how members have funded their accounts, right? And then they eventually like if they don't fund they close, So I think it's about eight months So if they haven't funded in eight months, then they'll finally close it And so that means we're not telling them and helping them understand the value and take confidence.

So maybe I ask the question and maybe you can use it as this vehicle change Even if you had a job if you had a member sitting in front of you and you wanted to communicate What is this early value of self-directed or global? What would it be.

Like I think I mean early value would be like how your money can compound and grow over time I think that's kind of the picture that's kind of missing like people can visualize, you know, The impact this can make on their lives is like making small, like I think Diane said, make $5 a month investment and how over time that can really grow. We don't have any models or anything like that that kind of shows like potential value. I think that's a big missing component.

Yeah, I think that's, I definitely agree with you on that.

And if you could comment on member behavior, do you see them actually investing one time or do you see more recurring investments.

There are a lot of members with recurring transactions. I believe the number, and actually I kind of have it here. So about 18% of them do have a recurring deposit set up. And they keep the recurring deposit set up for a very long period of time. I think the last time I checked it was about, it was over a year that they keep it active. And the only time that they do close it is... And what causes the closure of that or the end of that recurring deposit is if the NFCU checking account is closed and then they just don't relink.

So there's a little bit of a friction point there because that goes back to when the systems are not talking, right? So they close their account at NFCU, that doesn't get communicated to DI, those transactions are still being pulled from their closed account, that causes a negative member experience. They end that recurring transaction, and they don't re-establish it, so, but that number is continuing to be growing, of members that have been paying. It's 18% currently.

It's 18% currently, but it was 16% early last year, so it's a slow, gradual movement, but yeah.

But it's responding in the right direction.

And are we talking about Robo? Are we talking about investment in Robo, or are we talking...

For both, Robo and Self-Directed, but Robo accounts are the ones that have the most recurring.

deposit setup. In the interest of time, I think we'll have to move quickly to the advisor side, because we only have 35 minutes left. So I'm going to skip the servicing part. Anyway, we will have more discussions with Molly separately on servicing later on what are the top servicing drivers that you guys get chats or calls for. I think one of the things was already mentioned was IRA withdrawals, if I'm not wrong, Molly. That was something that we discussed last time. But there might be also some other servicing interactions that might be creating frustrations,

and we would like to discuss that later. But for now, we will move on to the advisor-led part of the business. So again, we would like to give first 10-15 minutes for you guys to explain us your vision for now and three years for the advisor-led, scalability, business success that you would like to see. Thank you, Robo. Thank you for having me. Any slides? Any unstructured is also fine. Slides also.

Yeah, I don't think we have any slides. So, Mark, if you're okay with it, I can just give a general overview of who we are, how we serve. And then Mark, he's really leading our strategy. A lot of this, we're currently in flight, really determining what some of our tactics are going to be going all the way out to 2030. But from the advisor side, I'll just start at NFIS. NFIS. So, we are an introducing broker-dealer. We do own our own RIA broker-dealer, which is extremely unique in the credit union to be your own RIA BD.

So, that differentiates us right there. I already mentioned from an AUA standpoint, about $7.4 billion, where we stand now. Of that, about $500 million of that is digital investor. Okay. How we serve members, really a couple of different components that help complement digital investor. So we talked about Patrick Bryant's team. We call that the Investment Advisory Center. You can think of them as really your house. They work in a team environment.

Typically, they work with members between 2,500 to 50,000. The ones under 2,500 are really the opportunities for digital investor. The ones above 50,000 that come to them, they'll partner or they'll hand them off, refer them to a financial advisor. We have financial advisors across the country. We have face-to-face. They're attached to branches. Most of them, multiple branches could be two, three, four.

We also have a virtual component, right, for obvious reasons. We can serve all of our members across the collective United States. As of the end of last year, a little bit north of 80 total financial advisors, we will be up to close to 100 this time, this time this year, at the end of this year, I was about to say next year, at the end of 2026, significant growth over the past two years, about 50% growth in the financial advisor model.

So that’s kind of how we serve from a financial advisor standpoint. And then, of course, we have our service and support team that work in a team-based approach with the financial advisors. Tyler Story is on this call because part of the service and support team, we have a phone and digital investor chat team. So Tyler’s team, they flex between inbound call center, members having questions, and then they support with the digital investor chat. I think one of our opportunities, and we’ve talked a little bit about this,

but how do we nurture our members along the way, right? So a lot of these smaller digital investor accounts, these member relationships have probably grown over the years, and how is that a seamless handoff to a financial advisor as they’ve grown up? So that’s just very high level from an advisor side. And then, Mark, from a strategy side, if you wanted to jump in.

Sure. Yeah, Michael did a great job of describing sort of the service delivery model. And, you know, basically our lifeblood and to be able to serve our members is through our MSRs and our branches and in our contact centers. So they’re the front line for our acquisition and for all of our referrals. And really, what our strategy is, is, you know, we need to increase our penetration of memberships at Navy Federal, you know, we’ve got 15 million members, we’ve got about 500 or so.

have been engaged with 500,000 or though engaged with us today. And we want to increase that exponentially by 2030. And the way we want to do that is through, we’ve determined we need to, increase the number of financial advisors that we need to be able to serve that type of membership, right? Our advisors have pretty large books of businesses and Michael’s groups do a good job of, segmenting that stuff and making it as efficient as possible but we we need more um so we’re we’re.

in a search like i said you know we want 90 to 100 we want to be we think we have the capacity of the deposits today at the credit union to have at least 125 financial advisors service that that the organization um so how do we how do we continue to um engage with those members big part of the effort is through the twb the transitional wealth building where we’re trying to get that financially healthy um member to now take the next step and start investing.

we think there’s there’s a confidence issue there’s a there and and so we want to make our products simple as possible we want to have bridge products to help them take this step without maybe taking a lot of risk and that they’re not used to until they become comfortable, you, But the biggest barrier we have is awareness. It comes up all the time. Only 36% of our members know we even exist as an entity. And so we’re all about trying to figure out ways to increase that awareness,

not just through marketing, but through other ways, like trying to integrate more with the credit union and have sort of that unified experience to be able to use data insights and our propensity models to... But the messaging at the right time in front

of the right member that we exist, we provide value to them and how they can easily engage with us. So we have some big efforts going on to do that.

We're targeting sort of what we call the mass market and the middle market. So really kind of, for the most part, people with assets, I forget the exact numbers we're looking at, but let's say it's below $500,000, maybe even below $250,000. But we want to develop, educate, and grow the mass market so that when they're ready, they think of us first before they think of another financial institution, and they go over there, right?

And then, you know, we feel like the middle market is... If we can raise awareness with them, we know we have their trust and loyalty at the credit union side. You know, we just got to increase that awareness, simplify the ways to get over and to work with us. But we think we've got all the services and all the products available to serve that market very efficiently and very well. And we've got proven satisfaction statistics with the people that we work with that we.

know we can do that.

What do you define as the middle market? You said that was the middle market, but if mass is give or take 500,000 assets, what do you define as the middle.

I'm sorry. The mass is like actually below that. The mass is more like 50,000 or below. Yeah. And the middle market is like that 50,000. Yeah. Yeah, to 250 to 500 or so, like that. And then you get into more of the affluent and the higher net worth people, which we already do a good job penetrating with them.

Yep.

Yes, thank you. Yeah, sorry, I wasn't clear on that, because I couldn't remember the numbers off the top of my head. I think the other thing we're trying to do is, you know, optimizing, and this goes to a little bit the back base, too, I think, in the unified experience, but we need to make the member, obviously the member experience better, so we're looking at figuring out how do we transfer money back and forth better,

how do we integrate on the digital and mobile apps. How do we improve our advisor experience? So we've been taking a lot of steps to do that, looking into the future towards lead management, CRM, that kind of thing, our own CRM that we can control. And then just really the last is probably, you know, we're taking advantage of data and using our data-driven insights. to get members to engage with us.

So that's kind of it. In a summary, I may have left stuff out, so if anybody else wants to come in.

We've talked about this before, but I want to say it again. So one of the big differences in our program is that, like, Raymond James and Pershing and other firms, you know, Merrill Edge, not Merrill Edge, but when their programs are launched and automatically a financial advisor is assigned to a digital account. But we don't have any advisors assigned to the digital accounts. So we're kind of doing things in reverse, right?

So ideally, we have an investment advisor or a financial advisor bring in as one of the solutions for a family a digital investor account for their child or their minor or whatever. And I'd like to see that financial advisor be attached to that digital investor account so that the member, you know, his household sees the whole thing together. So that's something. And we can have the stand-alones, you know, on either end, but we don't have that ability right now to automatically put that rep ID.

on the digital investor account so that the member can say, oh, yeah, you know, it was Tyler, you know, a story that I've been working with on this holistically for me and my family. I'm just using that as an example. But it is a differentiator here. Because our growth goals, you know, can't live just on the production of the financial advisors and with our average age of our members and our digital investor is already a very robust business. We get asked all the time by other companies like, how did you do this? You know, like we've stopped, started and stopped, you know, and all that. And some of the questions I can argue that I can tell is that, you know, suitable really for it, but we are, you know, doing the thing.

And so you can talk about an opportunity or an underpenetrated, you know, opportunity here. And it is, you know, to a large part because of the age of our membership, you know, absolutely a gateway or a bridge as we keep talking into continuing to build your financial health and to feel good, whatever your definition of that is, you know. So we've talked about this before, but I feel like it's a good point. The differentiator here is the financial advisor. and investment advisor are not attached to the digital investing experience yet, but we are distributing broker-dealer RIA.

so we will, whatever is best for the member, if it's a digital investor account, great. If it's a share certificate, great. If it's Vanguard, great. If it's BlackRock, great. We can do whatever is best, you know, for the member.

Are there a high number of digital investor accounts that are hitting this 50,000 threshold or getting to a point where you need to have FAs assigned or involved or should.

It's a fair number, but I want to say it's less than a thousand.

Is that something you guys are doing, or would it just sit in the digital investor if the member doesn't raise his hand and say, I'd like to talk to an FA.

It just sits in the digital investor. The best thing, you know, again, you know, I think the first part of our, change management here, is to shift from, it has always been built as self-selected, right? Self-directed, self-this, but how do we help you help yourself? You know, and so, like, being more proactive about it is what we really want to get, but we've got to get through, you know, our conversion, and then this, you know, exercise. Where we can really then move, and marketing and others,

you know, we've got to get going with this thing, right? Like, Molly, Molly's dream, you know, is to be able to do this, but, yeah. And I just feel like this was a good and special point to remind you guys of this. Yeah, good. Good, thank you.

Thanks, Mark. Thanks, Diane. I think, Shyam, you had a question for Diane.

Yeah, that's me about... yes dan so just piggybacking on what you said right um curious to understand in terms of acquiring one of these advisor-led customers we've seen a variety of different models across our customer base and also prospects that we consult with um and since you mentioned lead management and mark mentioned uh having your own cr under key control how do you find the funnel today to find this advisor-led market amongst your customer base and how do you tap into it.

how do you tap into the customers um at the branch or outside the general population.

is that what you're asking yeah no within the ns2 member base you're obviously identifying customers, uh who might fit the advisor-led model right who would be interested in investment advice, how do you tap into that usually there's either referrals of existing customers who refer, others or you know because typically even a digital investor as you mentioned unless they speak to a relationship manager or an advisor the bank doesn't understand that they may have held away assets somewhere else they may have only 10 000 invested in the digital investor.

setup and may not fit the price for your advisor model but they could have held away assets in, and only when they speak to somebody they see somebody you can they can trust and then they decide to consolidate their position so i'm really curious to understand what what is really working for you today.

It's a great question. So how we get to that acquisition today is through referrals, through our member service representatives that are in the branches that are in the contact center. So they are the ones on the front lines. They're having conversations, financial wellness conversations, financial transaction conversations with the member. And they are trained to sort of recognize opportunities where a member might need help.

maybe federal investment services. So they put in a referral into a, Salesforce is the current system that we use to do that. It goes to Patrick Bryant's group. This is the

team called The Met. And they reach out to the member, and they do the discovery work. So they ask all the questions about what, you know, what is it they're trying to accomplish? What are their needs? Do they have assets? We know their assets at the credit union,

but do they have assets elsewhere? And they get to the root of, you know, how we can help them. And then they refer that to the appropriate channel, whether that's digital investor, because, you know, maybe they just got a couple thousand dollars and they're just beginning to invest and they kind of want to do it on their own, to a investment or investment service center representative who can help them with stocks, bonds, 529 plans open an ira not stocks sorry mutual funds things like that um or maybe they have more.

complex needs they have a lot of more investable assets and then it goes to a financial advisor in their in that territory branch territory so yes it does thank you but today today we do with humans we want to do more of it with with the lead management system right being able to kind of tier those referrals um so that we're working on the ones that are most likely to want.

to do business with us you know today we get 30 000 referrals a year that gives you a sense of how much is coming through from the branches.

So, you can't say that we don't go, we use marketing tactics to drive, you know, awareness to us. Our financial advisors are often found on the website, on NFO, you know, and all of this. We don't really prospect because we can't handle the referral process. So, we don't go get clients per se.

If I could jump in a second, Patrick Taylor, we are building the chassis or the foundation or whatever buzzword you want to use to start that process. You know, as you mentioned, our financial advisors have grown from 40-some-odd to close to 100 in the last two and a half years. And so one of the opportunities there is to create space within those advisors where their practices have gotten so large that they can take on additional members.

And so with our partnership and our client, our CRM system, we are actually creating a segment in the books by bringing members into their segment that don't necessarily qualify them so they can prospect that way. And then we mentioned Patrick Bryant a couple times. That team, the Investment Advice Center, formerly of seven people, by the end of the year will be 22 plus another team. We're creating a foundation there where they can make calls to members that weren't thinking about us.

Our data analytics team has done a phenomenal job creating a sense to invest, and we're overlaying that with members that have CDs. and IRAs and other large cash balances and working with the credit unions to prospect those and introduce ourselves to them too. There's lots of ways, one of the other ways that we want to

do, which we're a little bit limited, is we believe that there should be a marketing engine, a local marketing engine around branches introducing advisors to that market.

That doesn't exist today, we're not at that maturity level. So there are things that we are doing other than just the referrals coming from the branch.

And that program is also in development and is going to start happening this year. You know, once we, we work closely with the branches to see where we should have foods on the ground, you know. And so it would be really, the idea is to let the community that we're in know that there is a financial advisor here at Navy Federal.

That's what we value out over some of those other like fintech style services too. Like this is not, like somebody you can meet with in person is not something that Robin Hoods or Wealthfront support. Sometimes it's good to tag your old school mess, you know. I think there's a light back to that for some members.

but just in terms of the vision right for the entire nfi proposition do you see the digital investor to be a stepping stone to get into advisor or do you see what city separate business models and people and you would want people leaning into obviously the advisor side more uh quickly rather than stepping into digital investor understanding what investing is like and this could be across different segments right there could be people who are savvy who are not investing savvy who are new to investing it could be a variety of different in the seconds you understand that.

so one question is which segment do you want to focus on and the second question is are there two separate things or do you feel like one is going to be a stepping stone to lead up to.

advisor so i i can actually take a stab at that um patrick brian down here in pensacola and i'm my group at the investment advisory center and the member engagement team member engagement team all referrals, through NFIS come through the member engagement team and the investment advisory team work with accounts 50,000 to 2,500 all over the world. So, you know, in a perfect world, the vision, would be our partnership with the credit union starting at PFM. The member gets on track with.

that department. They get their budgeting in order. They become disciplined and then they move to digital investor, robo-advisor, understand how that process works, grow their assets, and then my team takes over as an investment advisory center. When they get to that 2,500 to $50,000 mark, we can build them a portfolio, make investment recommendations, grow their assets up to that $50,000 mark, and then we do a handoff kind of white glove treatment to the personal financial advisor. So, that would kind of be the perfect world flow of our member that.

we're looking for. And our investment advisors, they actually have goals. It was newly implemented last year. So, we're going to be working on that. So, we're going to be working on that. Last year, we've been able, drill down more this year, but if we have that member that's between $2,500 and $50,000 and we're meeting with them, part of their goal is to ask additional questions, really uncover additional assets, and then hand it off to the financial advisor. So they actually have an asset goal of uncovering new assets that they pass off to the advisor. That's kind of how we flow within the enterprise.

Yeah, and I think that's how it stands today with some of our, you know, DI, in my opinion, DI capabilities, I definitely think today what Patrick said is kind of the stepping stone, and I saw Patrick Terrell put in something, opportunity to nurture, right? But I think if we were to introduce additional capabilities on the DI side, like tax harvesting, larger dollar amounts for taxable accounts, you know, I think that could create a different segment of...

interest for digital investor, right? But I think as of today, yeah, they complement each other and it's more of those low balance. Someone said about a thousand have over 50,000, right? So that's an opportunity for us to complement channels.

So this is our arc, but fundamentally speaking, we serve the member, how they want to be served. So somebody could, you know, I have less than, so this is why we have investment advisors because again, our membership is younger. Just because somebody has $25,000 doesn't mean they don't have a complicated financial life, you know, and maybe they have a special needs child, you know, like things like that straight. So that's why this group is all together so that, you know, and the member can say, well, we need to meet in person, and next time we're going to meet virtually, and next time it's going to be on the phone.

Like, you know, the main goal collectively is to meet the member, you know, where they are. But that's why, I mean, the opportunity with leading management and CRM to be able to automate these referrals will enable us to process them faster, you know, just collectively get the member to the right place, you know, as quickly as possible. So I just want to say, like, there's an overarching culture, you know, you know, it's suddenly sitting in front of one of our wealth advisors' desks. And it comes to the reality is now the $25,000 is all they have and they don't have assets anywhere else and they've got a lot of debt.

He don't know as well, so they're not going to not talk to, you know, and so the member and some other shops would. They'd be like, ooh, let's not waste each other's time, you know, let's go here or there.

Sorry, Diane. Go ahead, Diane.

Directionally, this helps guide our sweet spot, right, so that then we can handle anything else that comes our way.

Yeah, I was going to say in terms of the, yeah. because you said that you do want to make sure that customers or members come to you and appreciate the advice that you're giving you mentioned that there are 30,000 referrals that come in today from the branch and curious to know how much of them actually convert so how much of them because one that tells you, whether they had you have the right lead or the right referral and the hygienic referrals or otherwise so what what's your percentage of conversion in the.

under the phones all right you want to tackle that or you know I can I that's a great question we are actively working on ways to track from start to finish whether it's coming from the credit union where it came from all the way to our advisor and did we close did we get business how much assets and how much revenue was generated so we're working on that process, The total amount of referrals, give or take, is about 36,000 for 2025.

Of those, 51% were unable to contact, okay? So 49% of those we were able to contact in some form or fashion. As far as the closing ratio, that's why we're working with Ozaic, our broker-dealer, to find out a process to track that.

So typically in the wealth management space, and I'm not referring to a credit union having a wealth management brokerage advisory arm, it's around 15%, so give us an idea of what it's like. If it's higher, then that's great. But if it's not, then there's obviously an opportunity to get there, right? So I'm really trying to understand obviously we have only 8 minutes left but really if you look at the life cycle of a customer right from acquisition to you know funding the account because that's when you start charging AUM fees, right management fees once you know the account is funded over to engaging, growing AUM, net new business coming from the existing customers who are going out to new customers and also retention.

Where do you see the highest amount of friction, the highest amount of pain or if you had like one or two key metrics that you would like to change in the next one or two years, where would that come from.

Real quick, let me see if I can warm up to that answer. The prior question, you know there's some noise in those numbers, right? You know, Patrick Byatt said that you know roughly less than half are we answer the phone calls, right? and then we consider or respond to our contact so we we consider qualified referral as someone who who's open to any one of our channels right the digital channel 2500 or less 50 000 but i'd say.

you're probably directionally correct that around 10 to 15 percent probably get to where they meet with the financial advisor closer to that because remember our financial advisors while we aspire to build a wealth management offering you know we're starting at 50 000 to 100 000 their average practice is about 250 grand per person so that's there when you say friction you know i really think it is um the

speed of which we react to these referrals right the speed of which um they're the the members engaged with the msr or anybody of interest and.

And I think that plays along the same way with the digital channel as well. Someone asked earlier about tracking interest, and I think it's as simple as, do they click on the site and then start measuring from that, get to a classic funnel and start moving that way? With us, we have for a long time depended on the branches. And those members, when they come in, they're prepared to wait for another call, right? They're coming in the branch, they're taking care of business, they're used to that model going back home, and that's what some of the struggles we have with getting in contact with them.

When we have to get better, and Mark Kurz and Patrick Bryan are leading the effort, there's a whole other part of this organization that's called the call center that there's so much growth opportunity there, but the referrals there really have to be answered real time. So when we talk about Patrick Bryan and his team growing it, it has to be available there to be able to take those calls real time. So I think our speed to answer those referrals is the main friction point that we like to improve on.

Got it. Anything on transferring assets, you know, so we do at least observe that once you have onboarded them, asset transfer takes a lot of time. Anything on ongoing advice, the review cadence, do you guys do any review cadences? If yes, how often? Any of those points that come to mind? So asset transfers.

You mentioned a couple things. You're talking about the transfer of the assets, acquiring the business, and then I think you tailed into then sort of ongoing relationship. Ongoing relationship and ongoing review. Yeah. So those are two different things, acquiring the assets in the business. We work very closely with Lisa's team here in the service and our operations team. I don't think we have any, I don't think we differ from really any other brokerage organization out there where the standard process is of bringing assets in. We value a lot the business we get from the credit union.

So there's a lot of seamless transfers there, very smooth, but could be improved on. When it comes to the ongoing advice and connection with our members, across all of our investment advisors, financial advisors, there's plenty of opportunity for us to hold. in our practice management, our routines, re-engaging with our existing practices, right? Nurturing points, I think that goes along with every product we've talked about, right? Being able to nurture, continue the conversation,

re-engage with them, improve member satisfaction and help grow with them and add value to them. So I don't know if that answers your question. I didn't hear all of it completely, but let me know.

I think from a metric standpoint, if you're asking that, similar to every single FI out there in the world, right? What's our percent of wallet share that they have? I don't

know what our metric is, but from a metric standpoint, that's what every financial institution is chasing, right? They have money with us, but they also have X percent at Schwab, Vanguard, Fidelity, you know, someone else.

Mark, you mentioned that in order to grow the business, it's important to obviously have or hire more advisors. Today, you've obviously grown up in ranks to about 100 advisors today. But have you considered the idea that maybe there's a way that your members could appreciate digitally offered advice as well? That's in that everything needs a human being. Of course, it could be hand in the loop and all with AI. And that's where I think larger firms like yourself, who've enjoyed the trust of their members, can continue to enjoy that and leverage the equity that you've built to have digitized advice sent to your customers in conjunction, obviously, with proactive R&D face-to-face.

Do you see that there's propensity for this, there's appetite for this.

Absolutely. In fact, we were talking about that. I was just going to bring that up. Patrick, Terrell, Michael, and I have been talking about a sort of like a quick and easy financial plan, electronically, digitally, as an offering to our members as a gateway to help, number one, start to build that mass market confidence and financial health that we promised to deliver, but then also to better understand the member and their needs,

to shorten that, you know, the lead, the discovery on the lead management and the lead management. So that gives us a better opportunity to understand what they have, you know, with Navy Federal, what they have in outside assets, and it also helps us to get them to the right channel. And so I think that maybe that's where we're headed. But we've been talking about that and talking to a few partners. You know, we think having sort of a free, quick, you know, five minute financial planning advice model tool digitally would be a nice feature.

Let me just touch on that real quick. And for a few conversations, I'll run out of time, but that really ties in a little bit to what Molly's always been talking about, is that digital ecosystem, right? We're talking about digital investor, but why aren't there other digital, why isn't there a hub really to get your advice on our website and to do multiple pieces to take care of your financial security? Why is it just digital investing? So I think there, where you're going with, there could be sort of robo-advice within that, and frequent touch points as a nurturing standpoint to tie in with what Mark said.

Yeah, and what I mean is not a full financial plan by any means, but a few action items as a result that can help the member take the next step in their financial journey and hopefully prompting them to one of our channels. That may be very helpful.

okay uh thank you so much patrick mark uh matthew and molly i think diane has already left and, all the team members uh we do have some next steps but i don't think we have time now to discuss the next step so i'm going to probably invite a few of you to discuss the next steps because we would like to do a kind of sort of capability mapping uh from here on the from the problems that we have understood to look at the capabilities digital human capabilities that you have and how can we improve them uh is uh some of the topics that we would like to discuss so for.

example we heard today from you that referral is one of the things that you are already solving for for the investor sorry for the advisor side of the business for the investor side of the business activation is one of the things so we would like to dive deeper now and peel the onion a bit more on going through exactly what you're doing today how is it working what capabilities are in place what capabilities are not in place how does the journey look like and how can we improve it so that's going to be the next steps, i will reach out to a few of you one from the digital, investor side and also on the advisor led side so that we can work together and then define.

a few workshops from here any questions final thoughts yeah no um i think that's exactly what.

we're going to do so just a little step for everybody do expect to see some additional meetings come up with your calendars we'll divvy up the people depending on which uh workshop um you guys are required at and uh so i think that's what we're looking to so yeah i was saying that.

if you could just hang on for another minute or two matthew you know we're still in the room we can try to lay out at least some of those next so we may not get them on the calendar but be clear about what we want to do next in the next two or three four yeah and actually money can also hang.

out there thank you thank you very much thank you for the team thank you very much thanks everyone. hey thank you so much guys.

Yeah, yeah, yeah, absolutely, absolutely, thank you.

If there's anything just while it's fresh in our mind, there's a change to the approach. And if not, or even if so, how do we try to get something scheduled to reach or so forth.

Yeah, so I think at least we have a bit better idea of the problem statements now. So what we would like to do is maybe go into a few capabilities like the ones that we just discussed now. So I don't think that there's a massive change in the plan. Maybe we'll reduce the sessions a bit, which I think will put some smile to Molly and Matthew's face. But we'll reduce the settings a bit to really focus on some of the

problem statements that we have uncovered today. But Shahram, myself, Joey, also you, Jan, we would like to just do a little bit of a.

debrief and then come back with an updated plan. And then reach out to you, Molly and Matthew, and also someone from maybe from Mark. Of course, you know, we have Tim or Justin from digital team, but mark occurs probably we need him For the in for the advisor side business, you know Because I think then we can pull the right people from all parts of the business and really make the plan Yeah more tangible.

If you can refine the meetings that need to happen, yeah, We just need to know How can I but you don't have to be there, but we're the general participants that needed, Molly and I can go and then we can just start scheduling this stuff with with Lori. Yeah, so that'd be rather easy Of course, you can reach out to mark curves or or Michael or anybody else that you want to reach out to that's not an issue at all, But I think if you can just refine what it is and because there are there are definitely some things that you just need to.

Maybe just you know, I don't reconfigure. Areas You know that I do from the digital side the revenue stuff is not as important and that's much more important. I think on the, The advisor side, So, you know, so based on the things that you heard just refine that send it to us We can definitely get those meetings scheduled. Yeah, And I want to make sure that we're only inviting really the people that are needed. Yeah, I agree.

Yeah, I agree and then we can also make the group smaller with that right So I let give me some time maybe tomorrow day after but take tomorrow and Monday which I'm in with Joe, He wants their back from their flights. I don't know how much time then how for how long, guys going around joy but maybe on friday and monday we can sit together and then update the.

plan and send it back yeah we try to be tomorrow morning our time yeah okay i'll come here for you.

guys yeah okay okay thank you so much thanks matthew thanks bobby thank you
