2026-02-19 16:59:24

00:00:00 Speaker 1
I know it’s him.

00:00:04 mayur vichare
How are you, man?

00:00:05 Speaker 3
Doing pretty good.

00:00:08 mayur vichare
Nice. Hi Molly. Everybody.

00:00:17 Speaker 4
Hello. Good morning or afternoon wherever you guys are evening.

00:00:27 Speaker 1
Where are you at Meyer? Where do you live? Amsterdam, Oh, you’re in Amsterdam. I didn’t know if you were there headquarters. Yeah,

00:00:33 mayur vichare
The HQ. Ah, it’s uh it’s such a shitty weather today. Anyway, You know the you know the Dutch, and we always keep complaining about the weather. It’s not better for you guys probably but this is really shit. It’s February and I was really expecting some some good weather.

00:00:51 Speaker 1
Yeah, it’s seventy three and sunny here in Tennessee.

00:00:54 mayur vichare
Yeah yeah yeah Robert Robert on me yeah please.

00:01:00 mayur vichare
Uh, you guys are all in the same office or no? Yes, you Molly Tyler. No,

00:01:07 Speaker 5
I am.

00:01:09 mayur vichare
All over different places. Yeah, that’s why we’re doing these workshops.

00:01:11 Speaker 5
Yeah, Yeah I am in Texas. So I got sixty eight and actually kind of cloudy today, but wow Texas.

00:01:23 Speaker 4
And I am in South Carolina Charleston Charleston Are you really Martin?

00:01:29 Speaker 3
Yeah, I don't know. I thought you were in Virginia.

00:01:31 Speaker 1
You are in Charleston.

00:01:32 Speaker 3
I was, but I am not telling a whole lot of people, but I am fully remote now too. Nice! They only let the good ones do that, isn't that right? That's right. Only the good ones exactly You have to prove yourself that you can handle it, right? Yeah, you could be responsible and stay at home. That's right Are you in Nashville Tyler where are you?

00:01:57 Speaker 1
Am like Knoxville, I am like forty five minutes south of Nashville. So, like that last conference, I just drove back and forth from home. ;. I didn't stay at the hotel or anything. Oh, wow, nice! So, I am directly south of it. Only like Nashville to the southern borders probably like two hours. Nashville to the northern borders probably like not even an hour. So it's pretty quick to go from Alabama to Kentucky.

00:02:28 Speaker 1
Yeah, I am smack dab in between Nashville and the border. Gotcha, cool.

00:02:36 mayur vichare
Hey, within an hour we are out of the country, so that's Netherlands for you.

00:02:42 Speaker 3
It's probably don't take you very long to get to that border. It's on my bucket list to go to Netherlands for sure.

00:02:49 mayur vichare
Oh, you should be We will invite you. Tell us when you are coming here; we will take care of it Yeah, Sure.

00:02:56 Speaker 3
So Mark,

00:02:57 Speaker 1
Company trip? Company trip.

00:02:59 mayur vichare
Yeah. On the B card.

00:03:03 Speaker 1
Hey Manu. Hi. Hi Michael. Manu is part of uh backbase uh team, he's part of the architecture team, and Michael. Hey,

00:03:12 Speaker 3
My name is C O O C E O Up here comes some more There comes Landon Hey Landon.

00:03:28 Speaker 7
Hello, hello. Apologies for the delay. It asked me to re sign in right when I jumped in, which seems like that's always what happens. It happens with Teams a lot. I'm kind of sick right now and I mean no disrespect, but unless someone desperately wants me to have my camera on, I don't think you want to see me as is. I mean, I dressed nice, but it's the stuff above the neck. That's a problem. Yeah,

00:04:01 Speaker 4
You sound bit. You sound sick. Sound congested for sure, easily.

00:04:07 Speaker 7
Yeah, I'll keep myself on mute unless it's an emergency. But I wanted to say hi to everybody and let y'all know, I am up here and I am ready to rock. Hey Joey!

00:04:24 mayur vichare
Mute mute mute mute.

00:04:26 Speaker 8
I am saying hello gang and good morning afternoon. I guess we're all coming along here. Getting the band back together. That's right.

00:04:39 mayur vichare
Okay, I think we are complete on our side, right? I don't think uh Manu and Landon will represent the solution side of the world. Uh, do we need anyone else on your side? Mark Tyler Molly Michael. This is it right? This is the gang. This is the group that we will be working with today. Familiar faces. Familiar faces, so no introductions needed here. Um, I think uh so first thank you so much for the the last workshop. It helped us also to start, you know, making our business case. Now with some of the data points that you guys gave us. We also started putting like a capability analysis, Capability, maps and so on and so forth as part of the discussions uh with Manu, with Landon. We started discussing solutions like how can we solve the problems that that we have observed.

00:05:24 mayur vichare
That was that was already last week. So now every week we start iterating on our

solution, so that's something that we will start working on as we go. Today's session is more around servicing. When we say servicing, We mean everything to do with Molly your world and wherever human touch is involved on, or human connect is involved when it comes to the chat team or the call center team. If these are separate teams, So I need to also understand a little bit better on how servicing happens with you guys. If you remember, All the capability assessments that we did were a little too much on the member facing side because that was also the intention to first start with the member facing capabilities to understand the flow and so on. Now, we want to move into the servicing element where you have the human involvement. So that's the intention for workshop today. It is a ninety minute workshop or a little shy of ninety minutes. So I think we need to just let's just get into it.

00:06:21 mayur vichare
Before I dive deep into the workshop itself, What we would like to do is first create a clear inventory of all the channels and all the touch points that are there with your teams. And with your DI. This is only for investor, this is not for advisor led. So only for DI, what are the different touch points? What are the different channels that come across chat etc? So that's first thing that we would like to do. Then the transitions between the channels like from DI Fusion IQ to chat To branch to call center, all those things is what we just want to high level understand that, and then we will go into specific journeys. I think Molly in one of the first meetings you mentioned about IRA rollovers. That was one of the things that was like a pain point if I am not wrong. So, we will take a few of these use cases and see how the journey flows from DI to servicing, And we would love to see some of the systems again with dummy data is fine.

00:07:19 mayur vichare
Uh, just on the servicing side, how it happens. What do you do, Molly, your team Tyler uh and any other teams that are involved. Cool? Any questions before we dive deep? Okay. No. Then we go with the first thing which is the channel inventory. I am not presenting anything today because I don't want to confuse you with a lot of screens, but just a chat. Just first with a chat, and then we can go into more like a demo Do. You have any Do. You have any demo. Uh.

00:07:49 mayur vichare
Kind of things which, like just like what we did last time, to see your backend applications or employee applications and so on.

00:07:58 Speaker 4
I don't know if we were prepared for a demo per se. Were we team?

00:08:06 Speaker 9
I don't have a prepared video, but I have access to our test systems for both our backend system and. Our digital advisory system.

00:08:19 mayur vichare
Okay, So I think even if the the the chat system where you get the chats, if you can just see it, You know how you work through it with a sample and test data is also fine. Just just to understand how it looks, what it is and how it works in the back end right. So that's something that we would like to do. But before we go thereum, The first is to just understand all the touch points, a DI member has all channel touch points, right. So I know you have Fusion IQ, which is your channel. Uh DI app layerum. When it comes to the chat from the DI app, that's also one of the touch points, right? Where you can connect to Molly's team or some other teams, correct?

00:08:59 Speaker 5
It's actually Tyler's team. Tyler's team. That takes the chat.

00:09:04 Speaker 1
Yeah. Yeah, so I mean, you know, you see the little. I mean, I know you guys went on there and went through the onboarding and everything. You see the little bubble, just like any kind of website has at the bottom. You click that it pops up. You'll be welcomed by a welcome bot, So, you know, to be like, you know, transfer any agent shortly. What's your name So they type in their name, and then it'll go into our queue, and then it'll connect with one of the live agents so she can show you where the messages is.

00:09:31 Speaker 1
Yeah. Of course that's probably the same.

00:09:35 mayur vichare
Yeah And. So this is this is one. Uh I think I remember this one. And so so Tyler to your point, this is first picked up by a bot. Just to understand, you know, like what's your name and things like that, but that's it, right? That's where the bot stops. And then she wants to.

00:09:53 Speaker 9
I Think this is live though. And thanks Tyler for taking that on.

00:09:56 Speaker 1
Yeah, but there is not going to be any. There is no member data besides a name on here.

00:10:00 Speaker 8
If we're fine with that. I mean it's not going to give you any account numbers, any socials specific names anything like that. So, this is kind of how I see the view. Different manager view. These are my.

00:10:12 Speaker 1
This is, yeah, this is the manager's view. Okay, so you know, if I go to agent view, it's kind of the same thing. But if I just had conversations that I had, they'd be over here

and this is where I could type. But I am not in any of the live chats. So none of this information is going to populate. So like here is a visitor that we don't have any info on. Well, I wanted to, you know, i could click into here. Now i am in the screen where i can join, you know, see what all they're obviously looking for a custodial account. Um you know, it gives all the. User information here, where they're at, what page they're on. And, then most of the time we're going to use most of these canned chats, this predefined content here. So depending on what they're asking about, you know like hey, you know I want to transfer an account in and then come here. How do I transfer my CD? How do I transfer other securities from outside? So a lot of the cases are going to be there. But they're going to use most time it's navigational. Hey how do I do this? Do you offer that? So majority of the chats are pretty you know straightforward. Yes.

00:11:09 mayur vichare
So before before we go into the agent side, I mean on your side of the story, Uh anywhere else that they can reach you from, like, for example, if they open the N F C U app and they start a chat. I'm assuming there's a chat there too. Uh if I'm not right.

00:11:24 Speaker 1
But I don't think there's a chat directly inside the app because then wouldn't have to go to N F O like online. Don't think I've ever seen a chat option inside of my like N F C U banking app. Okay, You can send messages that'll go to an agent, to the right department, and they'll reach out to you.

00:11:42 Speaker 8
But I don't think there's a live chat option there. We used to offer we used to service where if somebody was on the Navy Federal website, like the credit union website, that they wanted to talk about investments, whatever else we would pick it up there. But that was probably sunsetted with that original conversion probably five years ago where we only service on Digital Investor. We're not part of the live chat on what we call NFO Navy Federal Online.

00:12:08 mayur vichare
Okay, and what happens when it comes to the contact center? Is that also your team, Tyler, or is there a separate team for the contact center? We also wanted to understand like, is there this does investing or N F I S N F G have a separate contact center? Or is it like part of the same N F C U teams?

00:12:27 Speaker 1
Part of the same same team is I've got primary phone people. Um that are the, you know they're going to get the phone calls first and I have primary chat people where they're going to get the chats first. But they both back each other up, so if we get busy on either one, they're going to accept overflowing phone calls or they're going to accept overflowing chat. So they're all trained on both calls coming in.

That's, where we kind of you know have a conversation? :, what are they looking for? If they need digital investor, you know as of now we don't service digital investor with a phone line. Okay, So we direct them to live chat, mainly because you know we can share screens, we can troubleshoot. You can't it's hard to do that over the phone when you are not seeing what the member is seeing.

00:13:02 Speaker 1
So it doesn't make sense to stay on the phone with them, direct them to chat, connect with them. So now your computers are connected and then take it from there. So we just direct them that way. But.

00:13:11 mayur vichare
Then when let's say when they have to reach out in case they call you, you just ask them does it happen? Does that happen anytime that they call you for DI and say, hey, I have an issue. No.

00:13:22 Speaker 4
So, just to clarify that our chat line or our phone line is separate from the contact center, isn't that correct? Tyler, right? Like, there's separate phone numbers. Separate phone numbers. So they're totally different. They're not connected whatsoever. Like if you are an NFFG member, you call their contact center, totally different number from the NFIS Navy FederalInvestment Services contact center.

00:13:46 Speaker 1
Now, they are they are connected through Genesis. So if somebody somebody calls certs IRAs and they're like, hey, I want to open up an IRA roll my four one k. But I want to invest it, but they can simply go into Genesis look in NFFG or NFIS. Click the button that comes into our queue like get directed here. You just can't get there from clicking a particular button on their IVR. You know, you have to ask for it to get over here.

00:14:08 mayur vichare
Got it. Um, the chat app that you guys have, Is it part of the Fusion IQ one? Or is it separate from Fusion IQ?

00:14:16 Speaker 1
Five person live engage.

00:14:17 mayur vichare
Are you you use LP? Okay. For now. Are you guys also Is.

00:14:23 Speaker 4
That a separate contract? I'm curious, just I have my own question about that. Is that a separate contract only?

00:14:31 Speaker 5
For for us, I think we're in the Navy Federal's contract for life.

00:14:35 Speaker 1
Oh, we just piggyback off of theirs. Okay, because that was the same thing when we were doing F O. We were sold as this looks exactly the same.

00:14:41 mayur vichare
Are you planning to replace them? From a solution standpoint, we need to think of integrating with the right ones. Are you planning to replace LP completely?

00:14:52 Speaker 1
It's very likely going to happen within the next two years.

00:14:55 mayur vichare
Okay, within the next two years. Okay, clearum, So, so that is clear. What happens any emails as a channel? Do you guys get any emails directly, Tyler?

00:15:06 Speaker 1
That's, probably one of the we probably get I would say average nine hundred to a thousand emails a month. The contact is much. Um you know, that's some people sending in forms. We don't ask for them. Um that's not the way you submit them in. They come through secure document upload. Um they just didn't communicate. So if we're not live on chat, you know, from seven to seven eight. Eastern, um, or was it eight to eight Eastern? Then, it'll direct you to contact the contact digital investor at Navy Federal email box for any questions. So after hours, that's where it's going to route to. Questions come there. I've got team members assigned to that specific box, so they're the ones responding into there. If, we need to submit a bag after we get paperwork in, and it's not in good order, You know they'll look through and say, hey, you know, this is wrong. You can whine it out, they'll give instructions on there.

00:15:58 Speaker 1
And provide the link to secure document upload. That's just our channel of communication back and forth with members. That's the only one that we use to communicate with members.

00:16:07 mayur vichare
Nine hundred nine hundred emails a day, sorry, a month. Per month,

00:16:11 Speaker 1
Yeah, roughly some months or more, some months or less.

00:16:14 mayur vichare
And, if you don't have this answer now, it's fine. But just uh, maybe a data point for later kind of emails that you get, like you gave me one example. But like what kind

of emails do you have something? Is it repeatable, the same kind of emails that you get, or is it like diverse?

00:16:29 Speaker 1
It's heavily majority documents not in good order.

00:16:33 mayur vichare
Okay, got it. And then you just basically respond to them with the same templated message. You guys have some templated messages somewhere,

00:16:41 Speaker 1
And we have full email templates depending on what it is to send out with instructions already laid out with examples of where to put what on paperwork. Um, but yeah, I mean, Looking through our secure document upload when they upload, there about fifty percent are not in good order. So half are completed, half are denied. That's a pretty high number.

00:16:59 mayur vichare
Yeah, And one sorry one question that's is that also on LP? Or is it like is it coming under oneumbrella of LP? Or is it not coming under LP the messaging one?

00:17:09 Speaker 1
That's probably another piggyback on maybe federal credit union side. Um we use their e- fax to Windows applicationum, So, there's a just routes to where we send them the secure document upload. They can choose where to send it. And Mark, again, is that also associated with RightFax at all? Because some things get routed there from RightFax.

00:17:31 Speaker 4
You're asking me? I think so. Yeah.

00:17:34 Speaker 1
Oh, I have no idea. But if people could direct it to where if it's coming to Navy Federal Financial Group or Navy FederalInvestment Services, They can direct do they want to go to an advisor or they send a documents to their financial advisor or they send into for digital investor? And so, my view, I just filter out to where everything is just digital investor. Now there is somebody else going into the box. If something comes into mind, they are checking in to see wrong place. We need to reroute that which you could do inside the system. So.

00:18:04 Speaker 10
There is no separate subdomain for digital investor right? There is no separate subdomain that they will be using to send that email right? Like for example like you know, Digitalinvestor at nfcu dash di dot com or something like that.

00:18:24 Speaker 1
That's just the all communication is to contact di, contact digital investor navyfederal dot org for the for the email. But the secure document uploads like a link. That'll just take you just to an upload website where they can upload documents.

00:18:37 Speaker 9
And I just want to jump in, so we're just talking about from a servicing perspective, right? As what's that email address that goes to servicing because there is a, Com munication email that we send out based off of communication that we need to send to members, such as order confirmations, trade confirmations, statements available, so on and so forth. So I don't know if we're blurring the lines a little bit, But from us, what Tyler is talking about as far as an email subdomain is from the servicing aspect. And then we have a different email for member comms.

00:19:13 Speaker 1
Just one That's a do not reply right?

00:19:21 mayur vichare
Correct. Okay, got it. Um, okay, yeah, okay. Cool. So this one. So this is clear. Uh, you guys have uh LP emails. It's very clear what happens when someone just goes to the branch Is that common with a request with a question for DI.

00:19:38 Speaker 1
It happens. I mean where they go in, they're asking for help. And usually that. MSR, what have you? They might reach out to somebody on our team phone or whatever. That's where we'll direct them to the live chat as well. They might direct them on their phone to live chat while they're in the branch, And Kind of walk through them there, But they're not able to offer any kind of service in the branch for digital investor.

00:19:59 mayur vichare
Got it. Any video call kind of functionalities, anything that you can reach out to them for? No.

00:20:06 Speaker 1
If we if we need to troubleshoot like extensively, like if it's a big issue, then that's usually where I'll reach out. That's what we consider escalations. And, we have an escalation in the box that team can send me a big issue coming here. We'll try to figure out the right places. Is it an issue with Fusion? Is it just user specific, you know, is their ISP, whatever it is? So we'll troubleshoot from there. That's whenever we actually will outbound call, but it'll be me.

00:20:29 mayur vichare
Okay. And Fusion I Q is not providing you with any sort of like a an employee portal of sorts, You know so that they so that you can just log in and see the screen? Or is

it happening through LP? All of this is happening through LP. The reason why I am asking, we do have when we are providing our digital banking solutions, we also provide you an access solution because it is linked. Right at the end of the day, You need to see what is happening on their screen, and it is under oneumbrella. So right now it is through LP correct? There is no employee just just the chat part.

00:21:00 Speaker 1
Just a chat part. Just the chat part of it. And, if you see their name popped up there, that means they're logged into their account. So that's part of the SSO. But, no, they'll be in DriveHub to see any of the backend stuff that's Drive Wells'. Backend systems where we can see positions, you know, transactions, compliance things, tax forms. Everything's there.

00:21:19 mayur vichare
Okay. So that's all on the driver side. Question?

00:21:23 Speaker 9
Were, you asking like, do we have a portal where if a member is running through some for troubleshooting running through some issues that we're able to like see a session and see what they've done? Um We don't currently have that. Level of capabilities,

00:21:45 mayur vichare
Yeah, that was one of my questions. Also, to able to of course see it but troubleshoot it. But also, for example, if you want to change if they want to change the password if they want to change the address, just giving examples I don't know how many of that happen. But how do you do that? Then is is it through DriveWell?

00:22:02 Speaker 1
Some things are tickets. Um some things we have the permissions to do. Um so if it requires a ticket, you know, we send that. My team will send that to. The digital products team, so Molly Michael team. Um, They'll send it there, and then I guess they determine is this something we can just put in? Or does it need to be a ticket to Fusion, ticket to DriveWell? Um, that's kind of how it operates now as tickets.

00:22:24 mayur vichare
Interesting. Um, Is it possible to also understand and see those tickets? Like what kind of tickets you guys have because it seems like, uh, so any changes that need to happen need to go to Fusion IQ. And then Fusion IQ will bring that change correct? Is that is that how it is?

00:22:41 Speaker 5
I mean, it depends on what the request is for. Like, some of the tickets just go directly to the custodian because it's the custodian's process of whether they need an extra form, process something. And those just go straight to the custodian. And then tickets that are going to Fusion are more or less, you could say trouble tickets,

meaning there's some sort of issue with a member. Um, And they need to do a research for that particular member to find out what the root cause of that issue is. Um, I'd probably say the majority of the time, it's been a data issue because of the custodian. And so they will do some coding around the custodians problems. You know, if we can't get the custodians to fix the data, um then they'll code around it to make it work.

00:23:32 mayur vichare
Hmm okay got it So now I have a, A better idea of at least you know what? Uh touch points you have chat, Uh chat is the primary one call center contact center. You guys get some, but you just have. Uh you know, sending it back to the chat and saying, guys, can you is better if we go through chat. There's an email box I think it's a shared email box with N F U N F I S. Um and there's no capability from Fusion IQ just uh, sorry, I forgot about this. Maybe it was there when you guys logged in, but uh I can go and just send a message to.

00:24:04 mayur vichare
The team, not a chat, but like a real email secured secured email secured messaging. We call it secured messaging, right? Manu, it's mostly secured messaging. Do you guys have like a secured messaging behind login not not chat?

00:24:21 Speaker 10
But you mentioned something about uploading the documents using secure site. But is it secure messaging or is it just a, Portal that you provided to the customer so that they can upload the documents.

00:24:34 Speaker 1
Spot on the latter.

00:24:36 Speaker 10
Okay. Can you show that? So instead of secure messaging, it's just the emails that comes to theum, secure, the contact at like yeah. How do you Yeah,

00:24:47 Speaker 1
But I mean our our LP is secured.

00:24:49 mayur vichare
Lp is secured clears But like I am talking about the email box. Uh mostly there, The email box you can just, It's it can just come from any normal Gmail ID, right? If I am not wrong, like uh. That's.

00:25:01 Speaker 1
Not going to be secured unless we add on one of our monikers in the subject line that will make it secure. Um or the secure document upload, where you can send a document using the moniker in the email that we use to make things go out securely, where that person is going to have to use a password to log into that

email, they can communicate back and it stays in that secured status. So you remove that. Monica, out of there. So I mean, that's possible, but it's rare. It's typically just a secure document upload.

00:25:29 mayur vichare
Hmm. Interesting. Any follow up questions? I saw Joey you unmuted. I thought uh you were saying something.

00:25:36 Speaker 8
Well, I was just saying, I mean, it's a secure inbox. So it's not secured messaging in all the world, but the secure inbox. We covered it.

00:25:43 mayur vichare
We're good Okay good Um. So is this clear now? So app to chat app to phone, Mostly that I was just trying to also map that transition in my head, how the transition is happening from branch also, but it's mostly it's rare. Um email is clear, phone is clear. Okay. Now before before we um go into the next section of what we wanted to do. Um zooming out top top requests that Tyler's team gets when it comes to chats, you want to focus on that? And how do you resolve those requests? Tyler?

00:26:18 mayur vichare
Uh, first we can just you know explain me how it works. Uh, we can just we just have to talk about the top twenty percent right? We are not saying, We don't need to solve for the whole uh hundred percent, but the top twenty percent that you keep getting. How do you solve for them either through LP? What are the different systems you use? Uh, we would love to see them if you have act. You, just you know, show it to us so that we have a mental map of sorts, you know, in our head how these things flow. Um. So let's start with the chat part, and then we go to the email in a similar way. Okay? So we are now diving deep.

00:26:49 Speaker 1
Yeah, you know, I would say, I mean, because they're the ones that receive all the requests from my team, so they probably know what more of the issues. But, what comes to the chat probably is most often is going to be about forms. You know whether it got rejected or whatever it is. Hey how do I fix this? What do I need? So, it's just kind of so they can talk to a person about why they've received an email that that form was not correct. Or hey, I submitted a transfer. You know, five days ago, where is it? So they're just trying. They're looking for status updates. That's probably the most common status update on our forms. So then they'll go back and research, you know, was that sent through to the digital team? So has that already been completed? Was it rejected for any reason? They can search the email box there and see, hey, they can look back there and say, hey, you missed two items. So, please go back on the form or refer to your email sent, you know, one twenty nine,

and it'll give you instructions on what you need to fix. So it's usually just looking for status updates.

00:27:47 mayur vichare
Processing. And so, so when you say status updates, you mean like you said one example and the other one was about forms. So what kind of forms are these?

00:27:57 Speaker 1
For their, you know, IRA withdrawals. You know, transfers in transfers out because DriveVault doesn't accept any third party paperwork. So they only accept their own. So it's all you're going to fill out our forms no matter what. So a lot of it is around those forms.

00:28:14 mayur vichare
It's not a physical form, right? Is it? Is it a physical form? No. It's a physical form.

00:28:20 Speaker 9
It's a physical form. Yeah, So like IRA, withdrawals is a physical form that needs to be filled out by the member. Um, sent through the secure mailbox, the chat team pulls it, Looks at the forum. If it's in good order, they send it over to the digital products team. We then take that form double check it again. Make sure it's in good order. Submit a ticket to drive wealth, and then drive wealth processes the withdrawal.

00:28:52 mayur vichare
Clear, um, what systems do you use for this? So for the ticketing system, uh,

00:29:00 Speaker 9
Yeah your three main systems are going to be Outlook obviously for email right? Um your next system isum, Utilizing DriveHub, which is Drive Wealth's system, to process. Sometimes with an automated account you have to sell positions, right? And. So we have to go in and sell positions for the automated accounts using Drive Wealth's system. And then using their ticketing system. So from a when it gets to the digital products team, it's three systems Outlook, DriveWell and then their DriveWell ticketing system.

00:29:38 Speaker 9
Which is a separate system than their drive hub.

00:29:41 mayur vichare
Hmm. Any way. We can see some of this just for an idea to understand how this looks like? Uh, also from from mental model standpoint, how how it works. One one question for Tyler. So Tyler, you are also sending an email to the digital products team, Is it just like uh so it is.

00:30:00 Speaker 1
We're the communication channel to the member. So we get whatever we need comes in and gets sent to their team. Hey, it's been completed whatever my, Team will communicate that back to the member.

00:30:09 mayur vichare
Okay, So it's like the the team that is basically communicating with all the requests that are going through you. Okay, um, But for the same thing for the chat, is it is it like just any request that you get, Uh what so one is what the kind of request that you're getting is the same like uh, the number of uh documents that are being uploaded. Can you go here? Just upload your document for I have a withdrawal, then you then it comes to you on an email. Then from the email, just the same workflow kicks in. Correct.

00:30:39 Speaker 1
Yeah, just screw document upload, grab it there, make sure it's in order. Save those, send the email with the orders in good form and explain them. I'll be able to draw four thousand five hundred dollars with hold ten percent whatever. And then that And it goes on for processing to digital products too.

00:30:54 mayur vichare
If, you had to map a pain point, Just a pain points for the mem for the member. And for you guys, How, would you map the pain points here? Like? Do you have any pain points for this process or you guys are fine? There's no issues here.

00:31:06 Speaker 1
It's just heavily manual. You know, there's nothing automated there, so it's just a lot of middle- manning.

00:31:15 Speaker 9
Yeah, definitely middle- manning and then impact to the member, right? So let's think about the member journey. I want a thousand dollars out of my IRA account. I have to get the form, fill the form out, submit the form. The form then gets pulled. Pulled form then gets sent to the digital products team. Digital products team has to liquidate assets, wait for those assets to settle, submit a ticket to Drive Wealth. Drive Wealth then has to process it. And if the member wants that fund to go to an external bank, right? Let's go extreme case, right? Extreme wise I want it to go my Wells Fargo bank.

00:32:00 Speaker 9
That's another couple of days of processing, right? Like, cause got to go through ACH and do all that other stuff. So, grand scheme of things, especially if you throw a holiday in between all of that, right? You are looking at almost a week, right? To get your your funds.

00:32:19 Speaker 1
And t here is not really any way for the member to track that without checking. Yeah, Understand where it's at.

00:32:23 mayur vichare
Your communication communication with the member is status updates nothing.

00:32:28 Speaker 1
It's, just your that we got way too much volume with too small of a team to be able to send a constant update. It's usually just your forms in good order. It's processing, please allow five to seven business days, and that's the communication they get.

00:32:40 Speaker 10
And then so when you get it home and there is a problem, Do you have the capability to reach out to the member instead of like rejecting it and wait for the member to come to you?

00:32:58 Speaker 1
That's to be more of the extreme case where we've got somebody that's just fed up and they get irate enough to where it gets to me. Or my team members don't have a problem because there is no, there is just email after email after email getting notifications from the contact dia, just because there is so much communication going out and in throughout the day. So there is no way to keep up with that. Um.

00:33:18 Speaker 10
Yeah. So but when you reject something I mean, the member may contact you in a chat or something like that, maybe in four days or five days. You don't have the capability to, as a member, To uh to notify the member that, like, okay, you, there is some issues with the with the form. Can you connect with an agent or something like that? Yeah,

00:33:38 Speaker 1
They'll get that immediately. So whenever my team member looks at it and says, like, you know, you're missing these three items, They'll send that email once they're processing that form that it's not in good order. So, they get an email first, but then the follow up from that is up to the member.

00:33:50 Speaker 10
Okay, so you cannot do an appointment scheduler or something like that right I'm not like with the member. Okay? No.

00:33:56 mayur vichare
And Tyler, if they reach out to you again saying, hey on the chat, hey I just submitted this form. Um. Let's say some other member picks it, some other some other team member from your side picks it up. Uh. And then he, he or she needs to check somewhere the status of it, right Where. Do they check the status of it? Do they go

and ask to the digital products team for the status of it. If it has passed on from you. Um Yeah.

00:34:21 Speaker 1
So there's It depends on the employee on how much they're going to research themselves. A lot of things you can find yourself without having to send the email. The digital products that's where I usually come in and try to coach, be like, "Hey, it's right here." So with the eFax synonymous with SDU, but it's eFax that I am pulling up on my side to see it. It's a clunky system ;. It's hard to work forms. Don't pull up. All you are seeing is access numbers. ; you are not seeing names ; you are not seeing anything. You got to click into it get document. And then sometimes that doesn't pop up. You got to click it ten times to even get the document. So it's kind of time consuming to research there, but there is deleted ones, there is received ones, there is completed ones and there is denied. So if they've been completed, they were in good order, they were sent off to the team. So, if you grab their access number from the credit union side and filter for that access number, you can see the four times they've submitted what was their most recent one? Was it. If it was completed, then we can ask for a status update where it's at because we know it was sent off processing.

00:35:18 Speaker 1
If it was denied, they know it was denied, or they can go through and search the email box to the content. I just looking anywhere in there was it sent to digital product team. So, you can just search that member name, and it'll probably come up with four or five emails of, you know, what's the most recent. But, it's not connected to the CRM inside of DriveHub to where you could just easily click the notes. And see it. You've got to do some manual researching for it.

00:35:43 mayur vichare
How much time does it take if someone reaches out to you for chat and you have to do this manual research? And then you know respond back to them. Is there a waiting time in this process?

00:35:52 Speaker 1
Average chats twelve minutes and forty one seconds. The average chat time,

00:35:56 mayur vichare
Give or take.

00:35:59 Speaker 1
I got that number recently from a report, so I was like," Hey, an accurate one: twelve minutes forty one seconds." Twelve.

00:36:04 mayur vichare
Minutes forty one seconds.

00:36:07 Speaker 1
I remember that number.

00:36:09 Speaker 4
So, that's yeah. So a general question of the team real quick: So with the. As a digital experience, I think of it as being paperless. Period. Like, this IRAs. Is it an compliance thing that paperwork's required on the IRA side? Or is this a clearinghouse partner thing that we have a chance to fix with the move to Apex?

00:36:37 Speaker 5
So it's a mix of both, right? Like, it's not necessarily I have to have a physical paper and fill it out, right? You could be asking, These questions and the UI experience in getting the answers, it's more about the questions and the answers than hey, it's a physical form that needs to be manually. I mean, this one, I mean, The IRA withdrawals, as an example is one thing we're trying to get one hundred percent an automated experience. So, then there is no more chat in. There is no more submit a ticket to my team. It's the member enters stuff on their request on our front end and it's processed with the custodian and it's done.

00:37:14 Speaker 5
Right, like, um, so it just depends on what the situation is. Now some are a little more complex than others, Which is where like, okay, I am going to start with my simple experiences where a member does. It's clear on what we're asking. There is no questions about it right versus the ones that are a little more complex that might need a little bit more support, which is where. Tyler's team chats and tells them, no, this means this. This is how you fill it out type of thing. But ideally all these manual process, I mean to me they should all get automated. But it is dependent upon our custodian. They have to be willing to produce an API for it to take in the data, Be able to process the data from that API versus a manual form that their operations team on their side is processing.

00:38:06 Speaker 1
And then, Mar, also like when we when we do eventually move to Apex. Of course, a lot of that will be mediated, But I still, it's still going to take some time for things that are also like an NSCU transfer form for a CD. Um from that, like you know, that's going to be communicating with one of the credit union systems where we have to have that. That's their form, they have to have that we have to upload. So I mean, uh it's probably possible, but I think it's going to be a phase two thing with them. A lot of okay. All right, sorry to take the time, but I just wanted to ask you.

00:38:33 mayur vichare
No worries, it's a good question. The next question was the same, you know why? At least on the UI side, I mean on the Fusion like you said, you should be able to have this kind of a form right? And, it's absolutely fine, even if it's for now, let's say they don't have an API. And that step probably still will take some time till the time

AppExchange comes in. And you know you guys have an API for it, and then it's going to be straight through kind of straight through. So my my question was more around, um, If if it at least it is in the UI side and then it goes to the digital products team. Can then the digital products team take it and then send it to, uh settle it and then send it to uhum, Drive Wealth in this case. Uh or a physical form is absolutely must have. Is that But Molly said no.

00:39:25 Speaker 9
So so like so like the IRA withdrawal I think that's, That's a custodian thing. We're fingers crossed, hopefully getting that fixed within the next couple of weeks. Fingers crossed. So that IRA withdrawals are a automated process, at least for the normal distribution early distribution aspect, right? So you talk about IRA withdrawals, you have recharacterizations, you have conversions, you have a whole host of other items.

00:39:57 Speaker 9
Those require a form because there are specific instructions that a member has to give, right? So, will there be a form? Yes, but at least for the simple ones, which is probably seventy percent of what Tyler's team gets IRA withdrawals. We are fingers crossed; hopefully,' going to have that solution fixed within the next couple of weeks. Um, as we continue to move on, right? You start thinking about rollovers and transfers. That form being filled out is a custodian form. That is their process, and that is what they are requiring. That, if it's a rollover and a member wants to roll their qualified plan over, Drive Wealth wants a form that they sign. They, then the member gets that form and sends it to Fidelity because that's usually where most plans are at, and send it to Fidelity. Fidelity cuts a check.

00:40:56 Speaker 9
Sends it either to the member or can send it directly to Drive Wells, right? So, those forms are needed for a rollover and a transfer. That's the same thing that is Drive Wells'process that they want us form signed, and they sign as custodian in order for a transfer to happen.

00:41:16 mayur vichare
Physical signing not not not e sign.

00:41:20 Speaker 9
Correct physicalum Not like a, I think I know where you are going, right? Like a digital form that can be filled in and signed. You hit submit, and it should just like go to the custodian. Eliminate the middleman, go straight straight to the custodian. No, it is a hey here is your form fill it out. Um, you could digital sign it right and then, but you then have to upload it to S C U to go to Tyler's team, and then it flows all the way down.

00:41:54 Speaker 5
So There's some work to like get other companies, the KKA custodians, to accept digital signatures. Sure, Fusion could absolutely recreate the form populated with the data. But it still needs that wet signature for them to accept it as valid. And so will Apex our new custodian be a little more amendable? We're hoping so such that we can continue to get more and more of these experiences automated. Um, but if they're not, Then it's kind of like well, we can only go so far in the automation of the process.

00:42:31 Speaker 10
How does the data get transferred from these forms? I mean, does somebody has to key it in or this is the data gets captured?

00:42:40 Speaker 5
Yeah, currently DriveWell is keying it in and sometimes that has led to errors.

00:42:45 Speaker 6
Yeah. Um.

00:42:51 mayur vichare
So, so thank you for that that piece. Now, What are the other requests that come uh from chat or any other things that you think that are very important You know, like just basics things, but it's just difficult for you to process it. Or one is I get the custodian part of it, but other requests that you keep getting. Last time you said five percent of them are educational. Uh more like, you know why my why is my portfolio down? You know those kind of uh those kind of requests, then.

00:43:18 Speaker 1
Yeah I mean after that it's, We have different stocks that are masked for conversion. You know, they're not going to be held on the new platform, so they're hey, why can I not trade with this? The button's not there. So then we'll explain that manually traded if they want to, but we're just trying to prevent future trading of that. So we get a decent amount of that now. I would say we probably get two to three of those sellouts per day from the mass stocks. Um,

00:43:42 Speaker 9
A Cats?

00:43:43 Speaker 1
Yeah, A Cats transfers That's probably next behind IRA withdrawals.

00:43:50 Speaker 1
So that's next, ACATS.

00:43:52 Speaker 9
And I think from a future standpoint, right, that could be something that could be

done digitally, right? It's right now a form. Same process. For ACATS?

00:44:06 mayur vichare
Sorry for ACATS?

00:44:07 Speaker 9
For ACATS it's a form. Yeah. And it goes through the same process that we've been talking about.

00:44:12 mayur vichare
Hmm The same portal where you where the secure upload. H appens. And then from the secure upload, it comes to Tyler's team verification, two I, two I, four I principle, and then that it goes to drive wealth. Yeah,

00:44:27 Speaker 9
But for ACATS, we the digital team, digital products team, and investor team we process the ACAT in DriveHub. We don't do a ticket. So we actually me actually go in and process it right uh for ACATS.

00:44:44 Speaker 1
And my year two, if you want to like you know after this meeting or anything, If you go to the digital investor website and you go to the help center, there is forms. It's, the very last one in the help center, where you can see all the different forms that we have. Yeah.

00:44:56 mayur vichare
Help Center Digital Investor N F I S right?

00:45:00 Speaker 9
Mhm. And I think Tyler touched on a really good process that we should look to improve asum the CD transfer. From or an IRA transfer from N F C U to Digital Investor, that one requires more steps, right? So, not only the SDU part, not only getting it over to Digital Investor, We then send it to the credit union for them to liquidate the CD and then send it over to Drive Vault. Right? So t here is a lot of manual processes that happen, and so t here is some opportunities for us to.

00:45:43 Speaker 9
Really improved the N F C U experience too.

00:45:46 mayur vichare
But sorry, so N F C U to N F I S is that part, right? That's why why is that manual because that is under yourumbrella directly. It has nothing to do with uh drive belt. So why is that? Is it a priority issue from uh like it's it's just it just never got prioritized. And so it's just there, or is it something else? Is it the is there a technical issue technology issue or something like that?

00:46:09 Speaker 1
We're not technically credit union. You know, we're under different umbrella, so we don't. That's where a lot of this happens with the advisor led side that we've covered, too, is that you know, CRMs don't talk systems, don't talk. I can't change anything on the credit union side. I can't do anything in their systems, you know at all. I can just use N F I S systems. So yeah, So we are at eighty federal, of course, you know that's the big dream, but we're not. You know, we're a wholly owned subsidiary. So everything we have is use some of the same systems, but we have a lot of our own.

00:46:42 mayur vichare
Got it. Um, I have just uh one more question on is there anything about tax, tax documentation related issues that you guys get? Like I need a member needs their uh tax doc to file the taxes, et cetera. Do you guys have any of those requests that keep coming in or?

00:46:58 Speaker 1
Of course not. We don't have a single one. That's what we're getting a lot of right now.

00:47:04 mayur vichare
Yeah. Uh what's uh what's the process for that? Uh how do they request these things from you?

00:47:11 Speaker 1
Same thing with top of ticketing. I mean, I am sure they can cover that. Like most of them generate, they were posted this week. And then, of course, t here is the isolated events where somebody's like, "I didn't get one. " Half the time, it's because they didn't have anything in their account to generate one. So, it's having to go through there and look at their transactions be like, you know, You've got twenty five dollars in here that you invested and you haven't sold it." There is no tax form. Other ones they do need one ; it was somehow missed. So it's like an isolated incident. We'll submit it over to digital team They'll submit a ticket and. Job workflow.

00:47:42 mayur vichare
And for the for the digital team, it's uh just generating these generating or you know just producing this. I don't know what to call it now. We just call generation of everything these days, right? With GPT with Claude. Uh so so how do you guys do it? Is it just like reaching out to any other parties involved to get this done? Or is it completely in your control?

00:48:04 Speaker 9
Yeah, so once we receive the request, we then look in Drive up to see if the,

Document was generated, um, and if it wasn't, then we submit a ticket to DriveWell for them to generate it. Right? So.

00:48:20 Speaker 1
But also a lot of it is navigation though. Like, you know, we found them on our our team will find it to where when you go to documents and forms on the when you are logged into your account. Um you know it's going to bring you to a page, but if you have multiple accounts, that's where kind of they need to pick their account that they're looking for. So the account they might be on, doesn't have a tax form. They drop down to their next account. Oh, there is my twenty twenty five ten ninety nine So, Some of it's you know, member not searching and.

00:48:48 mayur vichare
In the in the port. Yeah, okay. And. So there is no provision in, let's say, on the Fusion IQ portal to just you know, automatically keep it properly somewhere. You know, it's in the, it's like right in the top saying that, hey, it's a tax season. Yeah, a ten ninety nine that doesn't like happen at this point in time, right? Or, we have just supported your tax ten, ninety nine or it is generated that doesn't happen.

00:49:13 Speaker 1
Well, Mike, y'all sent out you know ten ninety nine s are coming. You know these did you? Yeah,

00:49:18 Speaker 9
We We had a banner up uh this year this year. That said, when ten eighty nine s were coming. I think the big issue is that our custodian is not necessarily the most consistent with their time. Um, so for example, They stated ten ninety nine s were going to be available by January thirty first. They didn't show up until a little bit after that, right? So t here is some balancing there. Um, But I see where I think you are going is that when it's tax season, have like a tax section that says.

00:50:00 Speaker 9
Here is your tab. Click on your taxes, quick and easily get your ten ninety nine or download it to Quicken, however you want to do things right. Like I could see where you are going with that.

00:50:10 mayur vichare
Yeah, Because I think at least in what I have seen is a lot of tax, of course, during tax season, a lot of calls call center getting calls. You know hey, I need my ten ninety nine. You know, where is it? And then it takes time for the call center teams from speaking about journey banking as well. So, that's that's why you know. I was mostly uh trying to understand what the process is. And also the chat, of course, from the chat teams. And also same thing for the branch teams, et cetera. Okay, clear. Anything on thinking of leaving? That hey we want to close the account. How do I close my account? I am just paying this. I think in one of the first meetings, there

was a person in the room who said, we sometimes they just forget that they are paying this three point five dollar fee.

00:50:56 mayur vichare
And, then they suddenly get realized about it, and then they start reaching out to you guys. Hey, I really want to close my account. How do I do that? The number was somewhere around eighteen percent or something. I don't remember the exact numbers, But that's something is that happening. And if it is happening, how often how many and how is the flow?

00:51:14 Speaker 1
Yeah, pretty decent amount. A lot of times it's because their interest hits. They withdrew their money, but then interest hits from the previous month, and they get thirteen cents in there. And that's the issue that causes it.

00:51:28 Speaker 5
Yeah, and some people are just making the assumption if they withdraw all their money, they're assuming their account automatically closes. Which I don't know how people get to that assumption, but like that's what their assumption is:" Hey,

00:51:44 Speaker 3
I've nothing left." There's nothing left,

00:51:48 Speaker 5
So why would I pay for it? Well, that's fine. Well, We don't know;, you might have just needed an emergency, and you are going to put it back in. So why would we close the account?

00:51:56 Speaker 5
So, that's kind of a fallacy on the member's part that we know there are some opportunities to do better communication, especially when we know they do a total liquidation to say," Hey, this is not closing the account." We could be popping a message like that to say you have to take an additional step or something, but that's not there today.

00:52:16 Speaker 1
Yeah, because that process is you have to click the top right. Go down to accounts and billing, click there, and that's where it gives you the option to close the account. But it's not just like right there in front of their face," close account."

00:52:27 mayur vichare
No one does that anyway; it's normal. What's.

00:52:32 Speaker 10
The inactive policy? Like, if there is nothing going on with the account for X number of days or months, then it go automatically into the dormant status. And if it

remains in the dormant for X number of days or months, then it goes. Close. Is there a policy like that for that?

00:52:54 Speaker 5
I mean, outside of a shipment, I mean, we have our shipment process, But like from a just dormancy of like your you could pay for your accountsum and not to have any activity in it. We're not closing accounts that have people actively paying for their subscriptions. Yeah.

00:53:13 Speaker 10
Yeah, if there is no. I mean like. As it. I know this is totally a different one then. That inactive dormant kind of a policy, right? For where the accounts get closed. Yeah.

00:53:26 Speaker 9
So I don't think we get to dormant status because that subscription fee is considered an activity transaction on your account. Um, so as long as the subscription fee is coming out, that account continues even if it has a zero balance. We pull it from the checking account, it populates in your brokerage account as a transaction. Of three dollars, so we avoid dormant status at that point. Right,

00:53:55 Speaker 10
Okay, thanks.

00:53:58 mayur vichare
Okay, so I just want to keep moving on the member engagement visibility side. I think this is probably more for Molly Michael you guys You know on do you guys have any dashboards or intelligence as we call it from a member intelligence standpoint? You know like how are they behaving what is, What are the dashboards, um, login frequency data? Let's start from just engagement visibility. Login frequency data. How do you segment members by activity level? You know, like all those kind of things. Do you have that by any chance from Fusion IQ or from.

00:54:36 Speaker 5
Well, Fusion sharing their data, their login data with it with us. We're just not doing anything with that data yet to have a dashboard on top of that data. Okay. Um so that data is going into our Data Lake, Um, at least some of it is, and we just haven't had the opportunity, quite frankly bandwidth to get anybody to build us a dashboard for it. So we don't have great insights on like login behavior by members.

00:55:04 mayur vichare
Okay, got it. Of course I think Tyler already answered this question but I still have it. I'm still going to ask you combining investment data with banking data to get insights from from that. I am assuming it's not there right like, Your banking, so many transactions, But you know this much investments. And then accordingly,

then you know, driving engagement on the basis of that. Those kind of things you don't have at this point in time, right? Michael Molly.

00:55:35 Speaker 9
I don't. We don't have that. Okay.

00:55:44 mayur vichare
No engagement scores, you know, Who owns first question, Who owns, who owns member engagement when it comes to NFIS?

00:55:58 Speaker 4
We All member engagement. There are some, I mean, you sort of puts together some stats. They're really high level on a week to week basis, But there's no data.

00:56:10 Speaker 5
Manual pool data like. So there's not like a dashboard that's. Automatically populating these. We're getting the data fed into it. We're not there yet.

00:56:21 Speaker 9
Got it. But we have survey, we do have survey data, so we have that also. But does that like if you are on our platform, you'll see it say," Do you want to provide feedback surveys?" So on and so forth.

00:56:36 mayur vichare
Okay, But does that also go to the same data lake like Molly was referring to? Or is it like something completely separate from? I am just trying to understand how much fragmentation. Sorry,

00:56:50 Speaker 5
The data lives separately. I am not aware that it lives in the data lake from the member surveys. But then, as far as like what's your definition of member engagement? Because like that's something that I know. We've been working on to figure out like what do we constitute as engagement? Because like take for instance an automated account, they may put money in there and just let it grow. Is it just is that considered you know like, Are we expecting them to put in money, additional money every so often, and that's considered engagement? But otherwise they're trusting that you know, that's why they subscribe to that account. They do not want to engage. They want their money just to work and us to manage it on their own. So like um so is the once a year looking at their tax statement considered engagement for those types of accounts? Right like yeah I think so I think we we have some work to do to define what what is.

00:57:42 Speaker 5
Engagement and what's the engagement model we want to drive what behaviors we want.

00:57:47 mayur vichare
I think this is a good question. The reason why I am asking you this, I was sitting with MSO team almost five months back, And they have a clear definition of what member engagement means for N F C U, and that is transactions. It is interaction. There is a framework that they showed us in that meeting, which defines member engagement. And which defines NPS also in the long run. So, that's my was my question towards is the same framework applied to N F I S. Or is a framework for the member engagement on the NFcu side and N F I S side different? Or maybe there is no framework at this point. I mean, that's also okay.

00:58:25 Speaker 4
Yeah, So it is the engagement framework is different. What you're referring to mayor? I've i've been part of, and i see through the MSO is. The member engagement at the credit union is all about extending the relationship across all the products and services. And with us, we're not actually included in any of those numbers. One, because we struggle with data obviously, and then two, We don't have our to Molly's point. We don't have our definition sorted out of what engagement really means. But.

00:59:05 Speaker 4
I believe we should follow that same model with the credit union. And it's not just like letting people in their accounts sit and be idle. Some people may want to do that, But we need to be able to try to continually to engage with them one form or another, Either you know, go from robo, and just letting your money sit to periodic, you know, investment. Into it through, you know, ACH or checking your robo. You wouldn't have to worry about asset allocation, but engaging with a financial advisor or doing more education—you know, that kind of thing. Like we have a lot of opportunity there. I think that we just haven't figured out the capabilities yet. But I think as we better understand our capabilities with.

01:00:03 Speaker 4
With Apex and whoever's going to help us with our front end, I think we can get to that issue.

01:00:10 mayur vichare
But the reason I am asking you is, it was quite interesting when I was looking at that framework. And, one of the very few credit unions or banks that I have seen has a proper engagement framework, which is like transacting often, interacting product penetrations intent. So, that was a very robust framework from the MSO team that I at least saw. That's why my question towards you?:, how do you track that? And how does this all pull into that framework? But I have my answer now; it's pretty clear. And then again,

01:00:45 Speaker 5
Like the one metric for us that we do track and we do, you know, Have use for a

pool of data for is recurring deposits because we consider that we considered that engagement right You are willing to commit funds on a recurring basis. Whether you have an automated or self directed account. Yeah. Um, but that's the only one that we, you could say come to an agreement on so far.

01:01:10 mayur vichare
And that that's a good one. Because on the NCU side, I know it is direct deposits, and they call it a DDNP model, right? If I'm not wrong and they track their DDNP because I imagine that is the way you start gaining primacy. So on your side it is RDS because at the end of the day, that's what is driving primacy on your side because they're investing more with you. So I imagine that is how you should be tracking it too, with of course the other things on interactions and so on so forth. But to your point, Any any of these things that come along when it comes to pulling the data, understanding the data and just throwing it on a dashboard, it's not easy. You just have to pull all these data. Maybe, they Fusion iQ sends you the datasets, and then you have to give it to your data lake team so that they can pull it on dashboard. Is that correct?

01:01:57 Speaker 5
Yeah, that's the idea is like everything will get to our data lake, um and then we can build dashboards on top of that. Um or dashboards being some being provided through Apex. Um, they have a little bit more of a visual reporting than versus just a raw report that just has lists of data, you know, in it. And we have to actually do our own analysis on. Um. So with the move to Custodian, we'll have some better insights than we do today. Do today.

01:02:31 Speaker 5
So, It's been a journey just to get the data to the warehouse, right? So with Drive Wealth, and then you know getting making that leap to get Fusion data in there. And not necessarily because well some of it's been a little both ways, right? Whether the credit union has had bandwidth to do that work for us or like for a Drive Wealth instance, that one was more like delays on their side because we couldn't get they just couldn't get their data teams to do the work for us.

01:02:58 mayur vichare
So, So I maybe this is mostly also from Manu's standpoint. Manu, please weigh in here. Do you really need to depend on DriveWell for uh for the engagement data? Because the engagement data, if let's say, at least in the case of Backbase, when it comes to how often they transact, how often they interact with you, How off you know like the recurring deposits that I said is something that also sits with at least in our case, it also sits in the persistence layer with us. So, you don't really have to depend on on an uh on the drive on DriveWell, right? Right, Manu, if I am not wrong. Please, you know, you are the solution.

01:03:33 Speaker 10
Yeah, but what is the persistence layer? Is that Fusion IQ?

01:03:36 mayur vichare
I don't know. I don't think they have a do you have does Fusion IQ have a persistence layer? Because DriveWell is the backend right? Yeah, correct.

01:03:47 Speaker 5
Yeah. Drivewell's the backend right? But that tells us like what likeum.

01:03:53 Speaker 5
Like what an account balance is, you know, like what they're invested in. Right? Fusion's not storing any of that data. Right? They call the guys that present it. They don't store it. That is a good point. But we just want them to store it with. Right? We don't want them to be storing it. Right? Because that's member data that we do not want, right? That's kind of where security-wise design, that's by design. Is such that that data lives with the custodian. We're not doing any extra storage such that, right? So, but.

01:04:26 Speaker 10
How do you audit then? Like, How do you audit the member activity on on the fusion layer? If you're not logging that information of what they're doing in the fusion IQ layer and you're tracking only on the on the backend layer.

01:04:48 Speaker 5
So I think there's a difference between long- term storage and logging data, like like what the data is versus the logging of the data transaction occurred. And so some of that does live on Fusion, And that's some of the data that we're trying to get into our data lake. Uh,

01:05:06 Speaker 4
So is what's up? Talk about the persistent layer if you don't mind. Just can you explain how it operates and works in best practice?

01:05:17 mayur vichare
From our side, you mean from backend side?

01:05:20 Speaker 4
Yeah, yeah.

01:05:25 Speaker 10
So when it comes to a processing layer, so this is the so any backend system, Any downstream system is considered as a system of record that you use it for much like a database kind of thing, right? And then like how do what do you do use a database for you, Use a database to store the data, and that is the system of record at the end of the day. But the persistent layer, controls the traffic on where it goes

and how it goes, and it also manages the experience that your member gets based on that. Because when it comes to a downstream system, It's not directly interacting with the member ;. It's the persistent layer or the layer that.

01:06:11 Speaker 10
The member has access to whether they are seeing the data or where they are generating the data, whether it is the payments or transactions and things like that. So that's where that persistent layer is controlling the narrative of how it goes, where it goes and how it manages these multiple systems that is underneath it. That's how we define it as that persistent layer. Maybe correct me if I'm wrong. No, no. If you have anything more to add there?

01:06:42 Speaker 5
And so, just to put it in the context of like, um, if you're talking about let's just say for instance for a trade. A trade occurred right? The system of record is technically the custodian. Does Fusion keep track of when do they submit that order to them? Yes. But not to the extent of it, like, you know, because at the end of the day from a regulatory perspective, the custodian is one responsible for that transaction. So, There is a little bit of a balance with the compliance aspect and then the experience aspect too. The.

01:07:20 Speaker 10
I think the auditing piece comes into the picture is that like let's say that like they submitted a trade and at 10:04, and the trade got executed at 10:24. And. The question is that like I mean if the trade is submitted for market price. The price had fluctuated from a ten oh four to a ten twenty four. So, But the downstream system is saying that, like okay, this I mean, we executed the trade when we received it kind of thing. So, that's where the accountability comes into the picture from one system to the other. Is it is it that like okay if a customer is saying that I submitted at ten oh four, but they may not have actually submitted at ten oh four?

01:08:09 Speaker 10
They just sat on it and probably clicked the submit at ten twenty four and not ten o four. But the customer thinks that like they could submitted at ten o four, and the price has fluctuated from what is the price at ten o four and when it got executed at ten twenty four. And the custodian is capturing only the ten twenty four information, not what happened at the customer side.

01:08:34 Speaker 5
So Fusion has some of that data. Okay.

01:08:39 Speaker 10
So, it is tracking what is happening from the customer side and until it gets in to send it to the custodian side, right? Yeah.

01:08:47 Speaker 9
Yeah, they have the timestamped order data. They they have some of that stored.

01:08:52 mayur vichare
So they are also persisting to a certain degree, but it is probably not to the same level. But we would we are not going into solutioning now, but they are persisting some things at this point in time. We don't know how much they persist, What they persist. And then is it also from an engagement standpoint useful data that they persist? So that they can also put it on a dashboard or something like that. We don't know that, right? At least this I don't know if this group knows it. If you guys have more information about how and what they persist, We would definitely like to dig into it on the ITX architecture side. Whenever you guys whenever we schedule that session because we would like to go into the layers of of that and what is persisted, What is not persisted because a lot of clients we work with, especially and also from the act standpoint, also from a regulation standpoint there is no.

01:09:38 mayur vichare
There is no problems on the regulation side for us to process the data because it drives engagement. Uh, you know, The the thing is it is uh replicated on uh on the system of record because we are not processing that data. We are processing the trades of course processed by custodian, but we are persisting it so that we can make it simpler. Uh and also more engagement driven. Uh, let's say, tomorrow, if something is down, something is wrong with dry belt, you know, or uh and its just goes completely down, we can still persist it. And when. Uh, drive wealth comes how we can push the trade. That is also the reason why the same is with core banking. Also on the NFU side, the persistence layer is used for that reason. Uh, In Backbase transaction enrichment also on the NFU side with Yodlee happens with the persistence layer of Backbase. Uh, so that's basically how uh, the architecture is done on Backbase side. But again, I don't want to go into solutioning. Now we will speak about that once we are done with our workshops and uh and so on. Um um for now, I don't have any other questions. I have clear idea on.

01:10:37 mayur vichare
The capabilities that you guys have, uh, the advice, the bridge, how it works today from the front to the middle to the back. Uh, Any data that you guys can give me, especially on I will give you I think Joey. We are supposed to submit a data request. I'm not sure if that was already submitted, but we would love to see a kind of request that you guys get on the uh uh on the chat and on number of number of requests, especially from a business case standpoint. And if we can help you with some other elements of it, at least. Inside the regulations, How can we help you with the current constraints that you have on the custodian side? So we would like to brainstorm internally on that. For that, We would like to know what kind of requests you get Tyler on uh on just a systemic level. One things that you have

already spoken about a few, but from a number standpoint it could really help us. Can you provide that to us please?

01:11:33 Speaker 8
I have not sent anything yet. I was kind of just waiting for today, see what we learned, if anything changed. Yeah. Um, so so Tyler, I didn't mean to interrupt you, but yeah there's there's some there's some other questions and things that we had. I'll just kind of hold off and see how what we learned today without. So we're not duplicating things. But, there is going to be some similar data requests. We have to send you guys.

01:11:53 mayur vichare
Yeah, it's not massive. So don't worry about it. It's got to be mostly validations. And uh, if you can just pull a report of the kind of requests that you get Tyler. And we see, you know, how we can actually smooth the whole journey that you just showed us. That would help us to get a bit more idea of it.

01:12:09 Speaker 1
Just send over that list and we'll see what we can find.

01:12:12 mayur vichare
Yeah, cool. Okay.

01:12:14 Speaker 9
And one thing I wanted to go back to, I know we were talking about member engagement stuff like that. All of our pages are tagged. One of the projects that I've been working on, I've just picked back up is following those tags and following the member journey. Right, and just seeing how fallout is happening and things of that nature. So, I am working on that. I mean, We could provide data probably give me about a week or so as I continue to build the charts out. But, we do have every page tagging from a digital every yeah We use Adobe Analytics tagging, And we can now it's not the most perfect data set, but it gives us insight into what's going on in the member journey. So cool.

01:13:00 Speaker 9
Just wanted to clarify that because I didn't want it to come across that. We aren't able to track member engagement. I think we do have the ability to do it. It's just a matter of bandwidth to sit there and create those fall out charts, flow charts, things of that nature.

01:13:18 mayur vichare
Got it. Got it. Okay, cool. No more questions from my side. Uh, any closing remarks from Joey, from Jan, from Manu or Landon? I think Landon we were supposed to discuss one more question. So I'm also leaving that five to seven minutes for for the last question.

01:13:34 Speaker 7
Yeah. So. So one additional question that I've been thinking about as you guys are talking, uh, is ACH as as the most common mode of transfer for uh for cash between either clients or B 2 B. Um, is there a reason that you guys do only do ACH? And if so, is that a choice or is that just how it is?

01:14:02 Speaker 1
You can wire. You want to for a fee.

01:14:07 Speaker 7
Okay, so it's it's more the fee that that pushes towards the ACH. Yeah. Fee avoidance. Basically makes sense.

01:14:19 Speaker 4
Mark your own here.

01:14:21 Speaker 4
Are you talking about incoming money flows or outgoing, or does it.

01:14:28 Speaker 7
Primarily incoming? The first time I started hearing about it was when you were talking about funding accounts, and with that, it sounded like the majority were coming in via ACH. And that's what kind of led us to, You know, giving them a little or giving the client a little or member a little cash so that they can trade with. Some of the money they're transferring in. So, I just wanted to see if it was a there are so many reasons like compliance and like internal rules, or like we find them more trustworthy and among all those things, I just wanted to get a better understanding of the why. And you've given me that.

01:15:09 Speaker 4
Oh no, I don't know if we've done it. It's a great question and it's something we're actually working on and we've got, Some resources that are being prioritized and dedicated to so right now, when we have money flow from a credit union checking account um or into digital investor, it goes through an ACH process. Um just like it would if we were getting money from Vanguard or from Fidelity or or another bank whatsoever, right? So um it shouldn't be that way, members feel like.

01:15:46 Speaker 4
We're all one entity, N F S and N F C U aren't separate. Um, even though technically from an organizational structure we are, but it shouldn't feel that way to the member. They think of us as one organization, and so that money flow should be real time. It shouldn't be uh take two three days to go through an A C H process. So um we're working on that. And that's that's our goal to be able to have money flow from to and from. Digital investor to the credit union, um, and real in real time. And right now we're kind of faking it. And, it's not sometimes. It's not a great experience for people who don't have lots of money in their checking account.

01:16:30 Speaker 7
Gotcha. Yeah, if someone's like living check paycheck to paycheck or something, I am guessing that can can sometimes become an issue.

01:16:38 Speaker 4
But yeah, right now because we front the money they invest it. Then we go two three days later to get it out of their account, and they've spent the money out of their checking account, and now they're in a rear they're in a rears problem.

01:16:54 Speaker 7
But I think this to be. Just out of curiosity how how do you solve for that?

01:17:04 Speaker 4
It's a good question. We're I don't think we've come up with the solution yet other than we've been working on. Real- time payment rails with other providers. So we're just trying to, and I can't remember the names of them, But there's a couple solutions out there that we're hoping we can take advantage of. So we're looking at various rails to do that.

01:17:31 Speaker 10
Is it because it's an external ACH? Like, do you have two routing numbers that goes from one to the other from N F C U to N F I S?

01:17:44 Speaker 3
I don't think it's a routing number thing, right, guys? No. It's not about.

01:17:50 Speaker 10
No, Is it an external ACH that goes through the Fed? And then come back like a NACHA kind of thing? Correct. And that's why it takes three to four days?

01:17:58 Speaker 9
Yeah, because the ACH is sent from the custodian which is DriveWell, right? Even though it's from the custodian going to NCU. So that's why it has to be the ACH rails. Mm- hmm. But if we could get to real time payments, assuming that the custodian is on RTP, right? Then you get that memo post crediting happening a lot faster.

01:18:26 Speaker 10
Have you I mean, have you do you have same day ACH? Or is it like the regular ACH? It's regular. Okay. Currently. Yeah, the same day ACH means it's just one day. I mean it's not the, Three four days, that's the last.

01:18:46 Speaker 5
I am sorry, you kind of cut out the what ACH.

01:18:50 Speaker 9
The same day ACH.

01:18:52 Speaker 5
Oh, same day, okay.

01:18:54 Speaker 9
The same day is like one day correct. Regular is the three to four, where we are on the regular three to four standpoint.

01:19:04 Speaker 10
Yeah, There is a cutoff time, usually I. Mean, yeah I think it's I don't know if it's twelve or two or something like that for the same days here. Yeah, yeah.

01:19:12 Speaker 9
With our facility at two PM, money movement cut off is two PM for them. Um, so.

01:19:20 mayur vichare
Cool. Okay,

01:19:21 Speaker 4
I think that's one of the things they're looking at is t here is some kind of new fed or maybe it's not even new, but we don't take advantage of it. It's a new or expedient rip.

01:20:14 Speaker 8
Closing words.

01:20:19 mayur vichare
Sorry, guys. Yes, thank you.

01:20:22 Speaker 7
It looks like you're on mute. Yeah,

01:20:24 mayur vichare
Yes. Oh, sorry, My laptop battery was about to die. So that's why So thank you so much team for for helping us today and also to get us the insights We will continue the solutioning part now Tyler Molly Michael. Please expect some questions from us on the numbers. Mostly, some of it will be validation. Some of it will be more like really understanding the chats. What kind of chats come just number wise, you know, so that we understand the number of processes that hit your systems. And and that's it. Thank you so much, and now we will move to the advisor led side of the business from here. We do have the intention to complete our report finalization of everything, the business case etc by mid March. So we are working towards that date.

01:21:10 mayur vichare
And then basically also come to the actual office, hopefully to see everyone in one room to present the final report, our demo and an architecture what we would like to propose. So those are the next steps that we would like to get towards. Yeah.

01:21:30 Speaker 5
Do you think that'll happen in March?

01:21:31 mayur vichare
We would love to. It depends.

01:21:35 Speaker 5
Because I mean my team will be up in March, the week of March 9 th. Through the thirteenth that week, so if it's during that week, that'd be great.

01:21:43 mayur vichare
What we could do is Molly, at least you know, even if the advisor led side of the world doesn't complete, We could at least come and speak about the digital investor side of the things. You know and deep dive into that side of the business and what we heard, what's the business value, what's the business case, what are the KPIs and also the solution that we would like to propose. So, what we can we could split it and we could go March ninth first only for DI. And then for the advisor led, we can do it in. December, uh, sorry. Uh, not December. March end or maybe April first week, something like that. If that works with you, so we can split it.

01:22:21 Speaker 4
Yeah, That might be a good solution to make sure we the whole DI team gets to hear and gets to see what you guys propose. Okay, I like that.

01:22:31 mayur vichare
Yeah that's a That's, a better idea also for us, then Then I think we need to schedule it. We'll speak with Joey Jan. And then we will come back to you with proposals. What's what are the dates Molly your team is around?

01:22:45 Speaker 5
So we'll be up at HQ. My whole team will be there the tenth, that arrives on the tenth, tenth through the twelfth they'll be there. I will be there the entire week, ninth through the thirteenth.

01:22:57 mayur vichare
Ninth through the thirteenth okay cool. Jan then maybe you'll have to make one more trip in a week after because you guys are maybe uh. The week before right and you guys are also meeting, a lot of people there.

01:23:11 Speaker 5
Yeah, we that's okay. Yeah, we can make it work.

01:23:14 mayur vichare
Cool. Okay, So then we will come back with the with the proposal for one day, uh Molly or half a day so that we guys can come together and speak to you. Yeah. Speak soon. Okay Thank you so much Bye Thank.

01:23:30 Speaker 5
You all Thank you.

01:32:46 Speaker 6
Okay.
